

生成的策略

生成式人工智能 (Generative AI)： 機器產生複雜有結構的物件

盡乎無法窮舉 由有限的基本單位構成

文字

影像

聲音

文字由 Token 構成

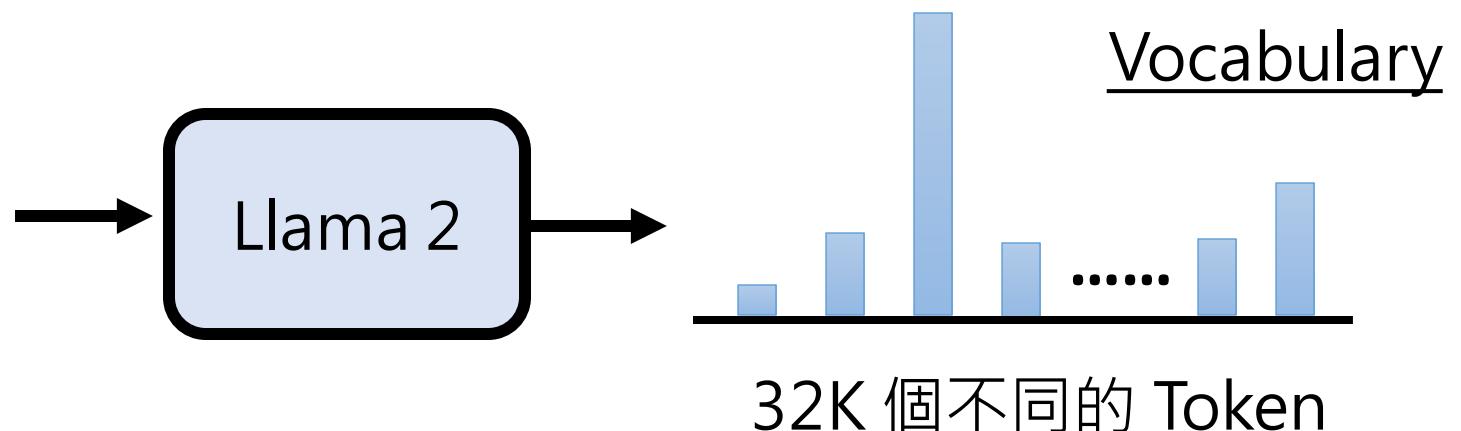

Tokens	Characters
65	373

A language model is a probabilistic model of a natural language. In 1980, the first significant statistical language model was proposed, and during the decade IBM performed 'Shannon-style' experiments, in which potential sources for language modeling improvement were identified by observing and analyzing the performance of human subjects in predicting or correcting text.

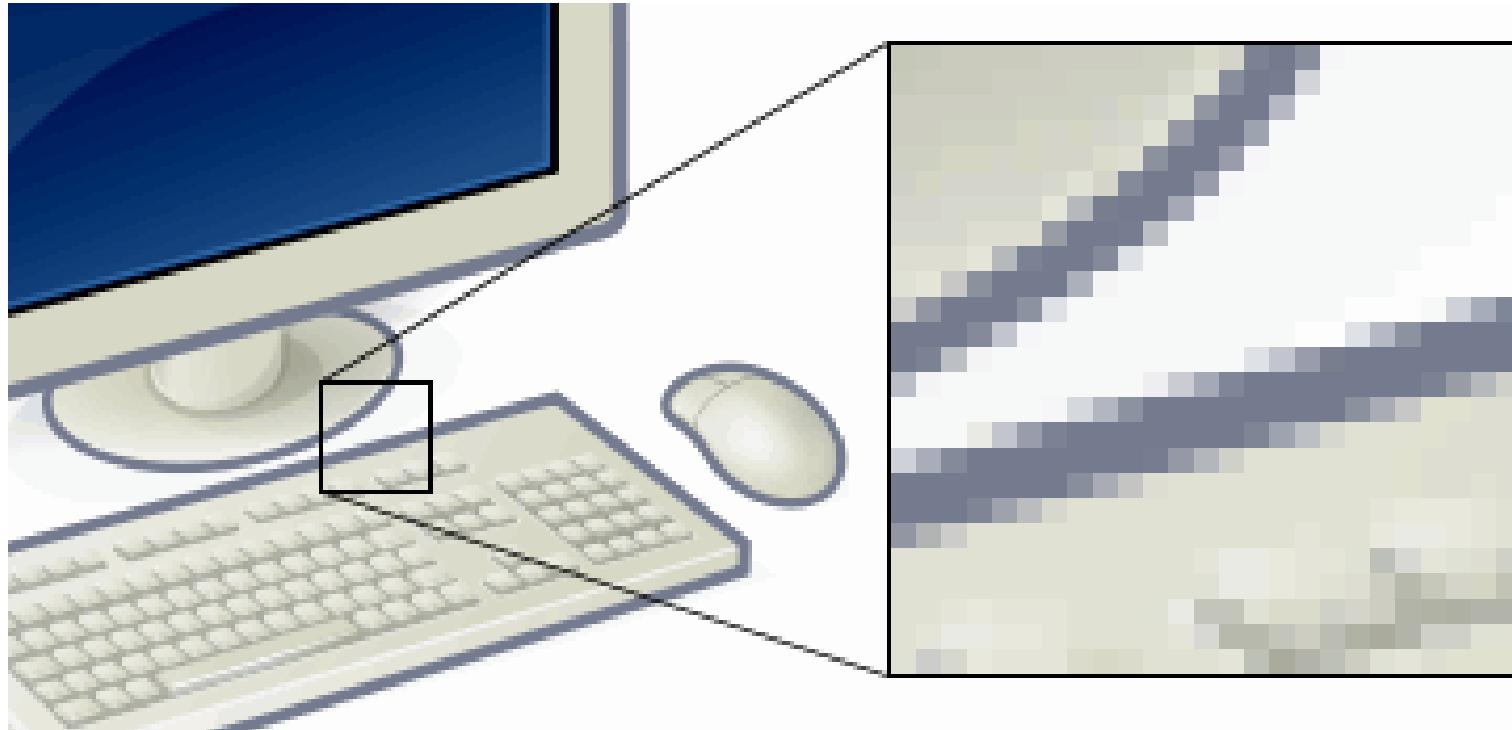

Text Token IDs

這門課是生成式 AI 導

影像由像素(Pixel)所構成

8 BPP → 256 色

16 BPP → 65536 色

24 BPP → 1670 萬色

每一個像素可以有多少顏色取決於 BPP (Bit per Pixel)

聲音由取樣點(Sample)所構成

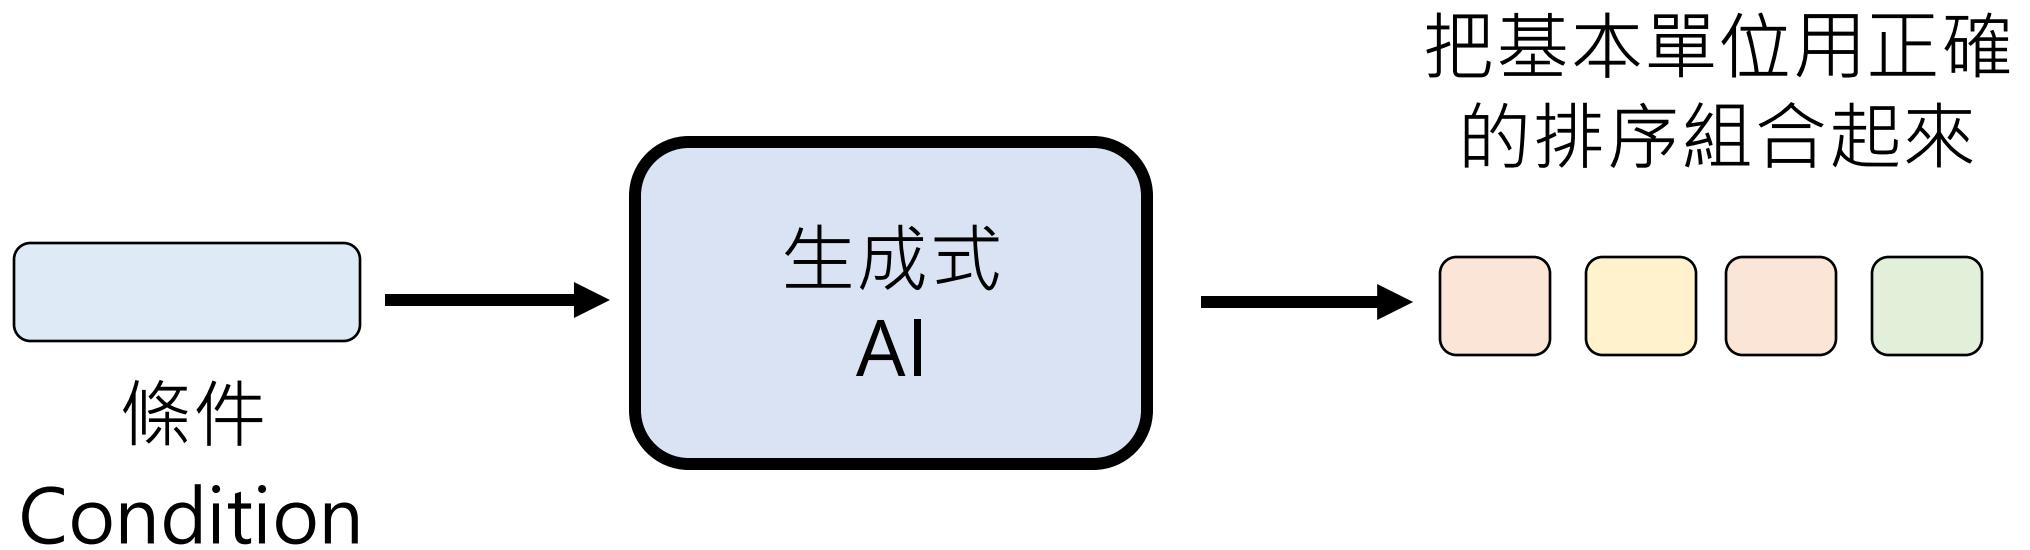

1 Second

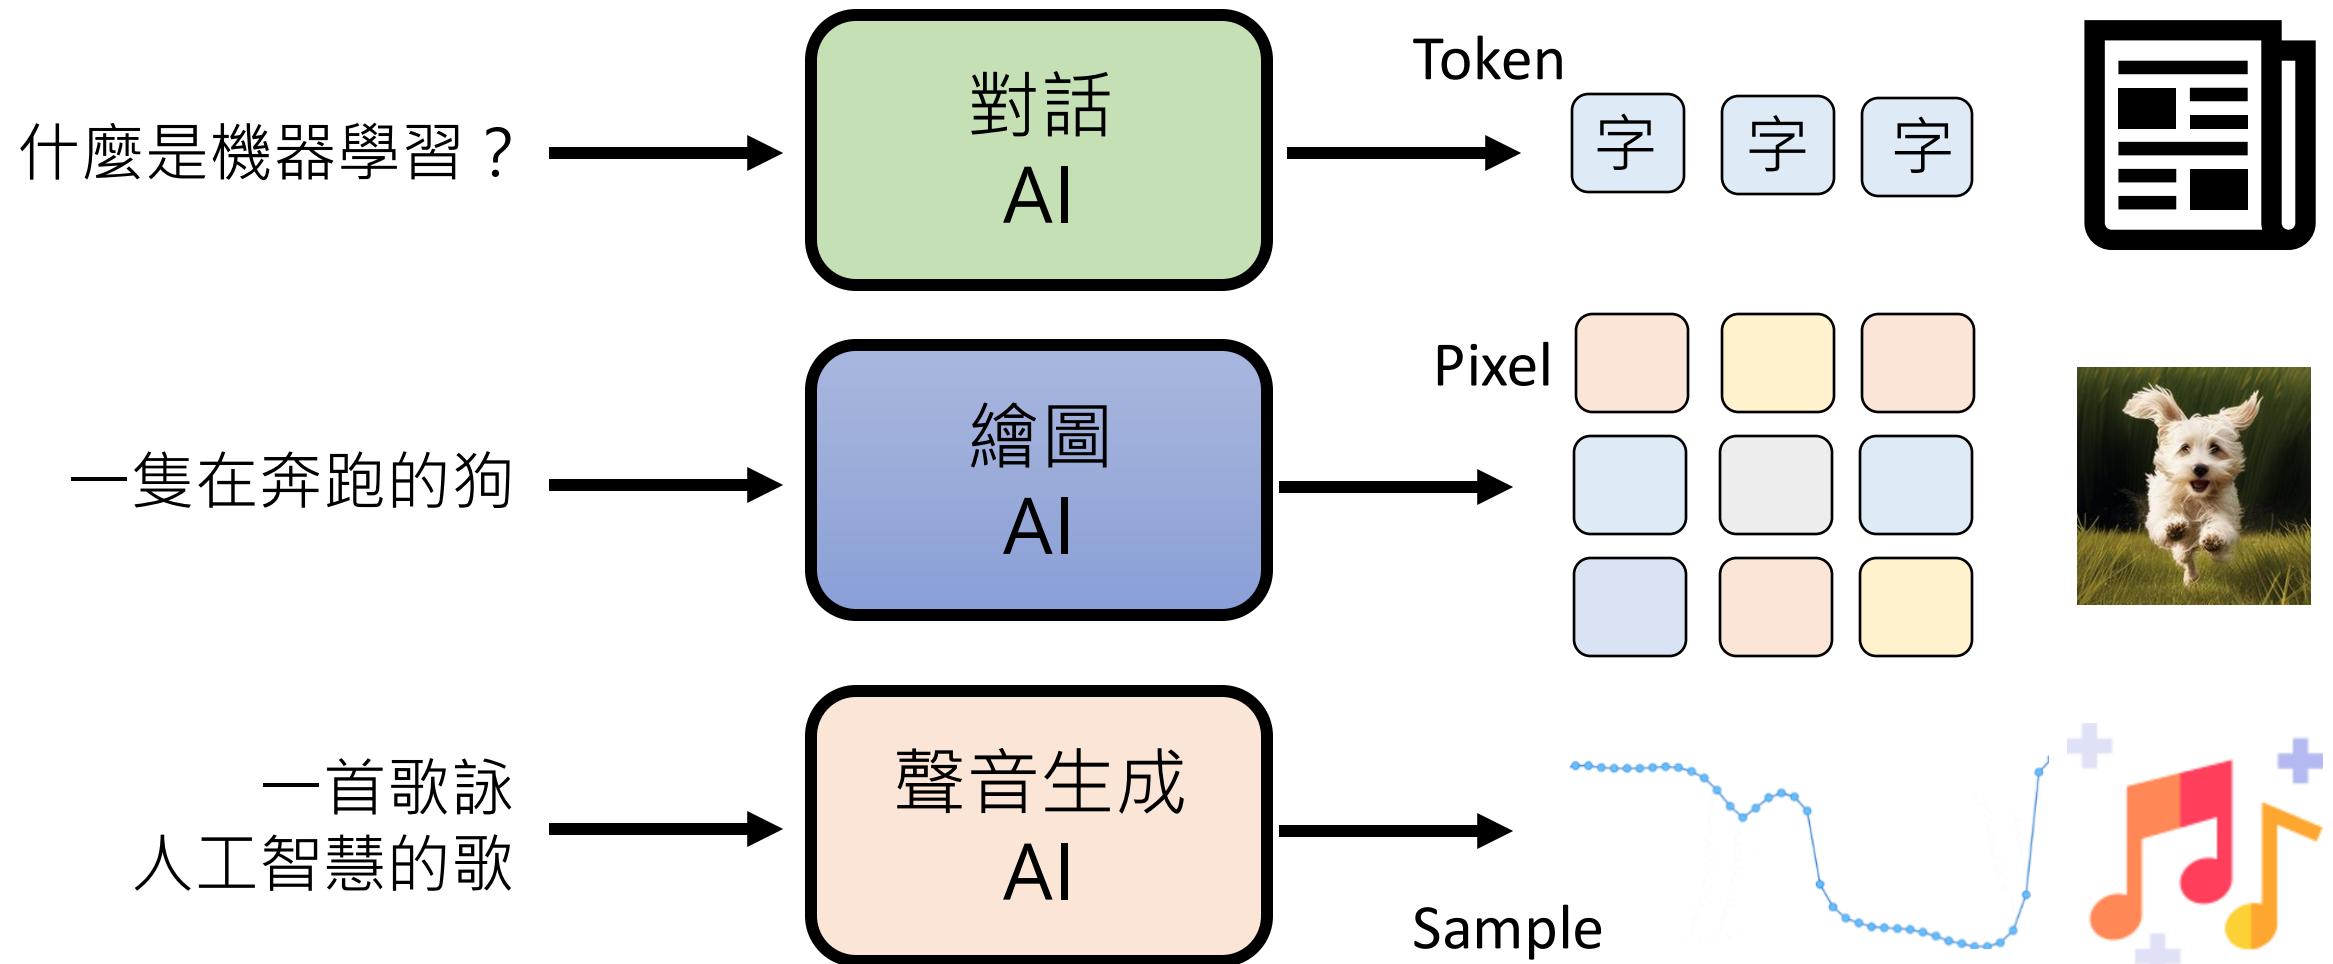

取樣率 (Sampling Rate) 16KHz : 每一秒有 16,000 個點

取樣解析度
(Bit Resolution)

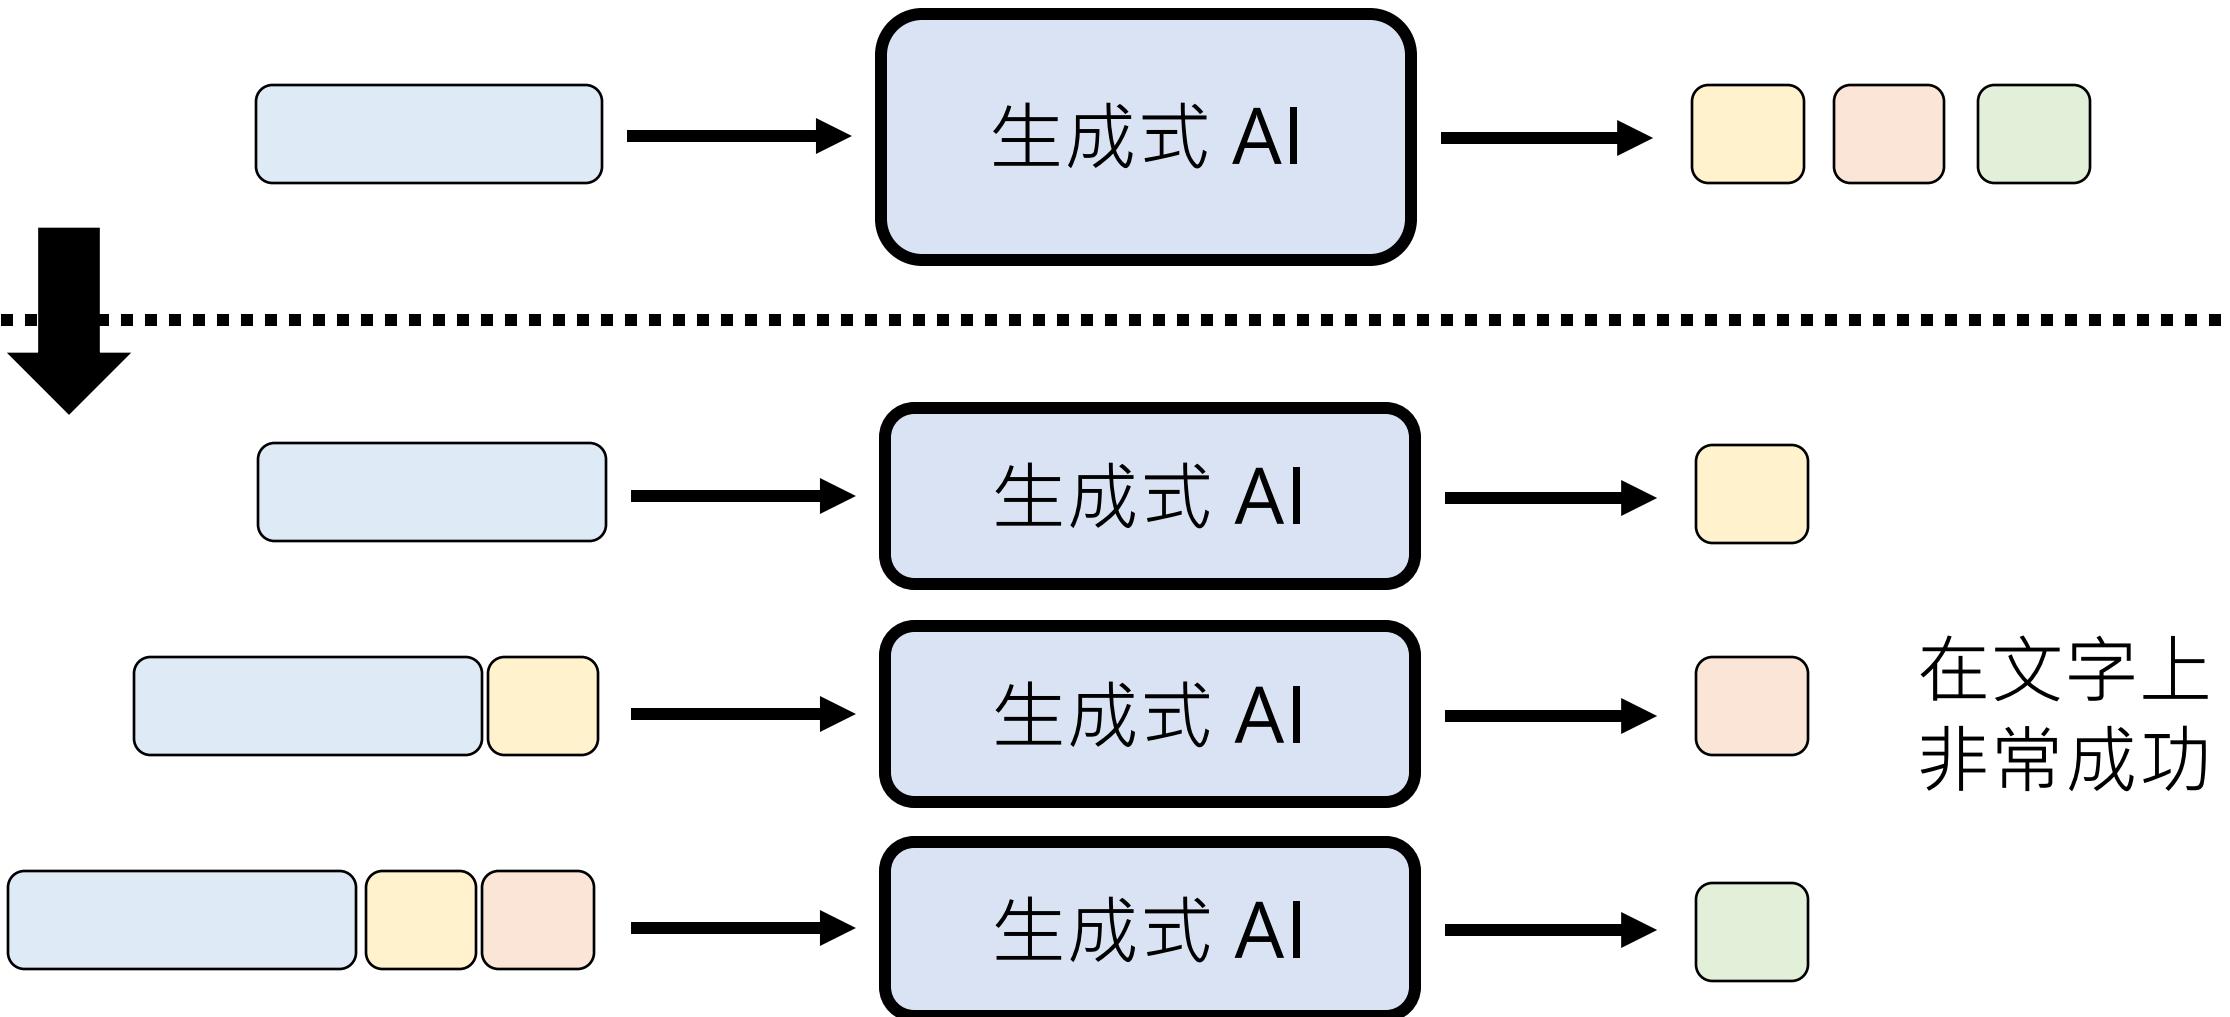

生成式人工智慧的本質

生成式人工智能的本質

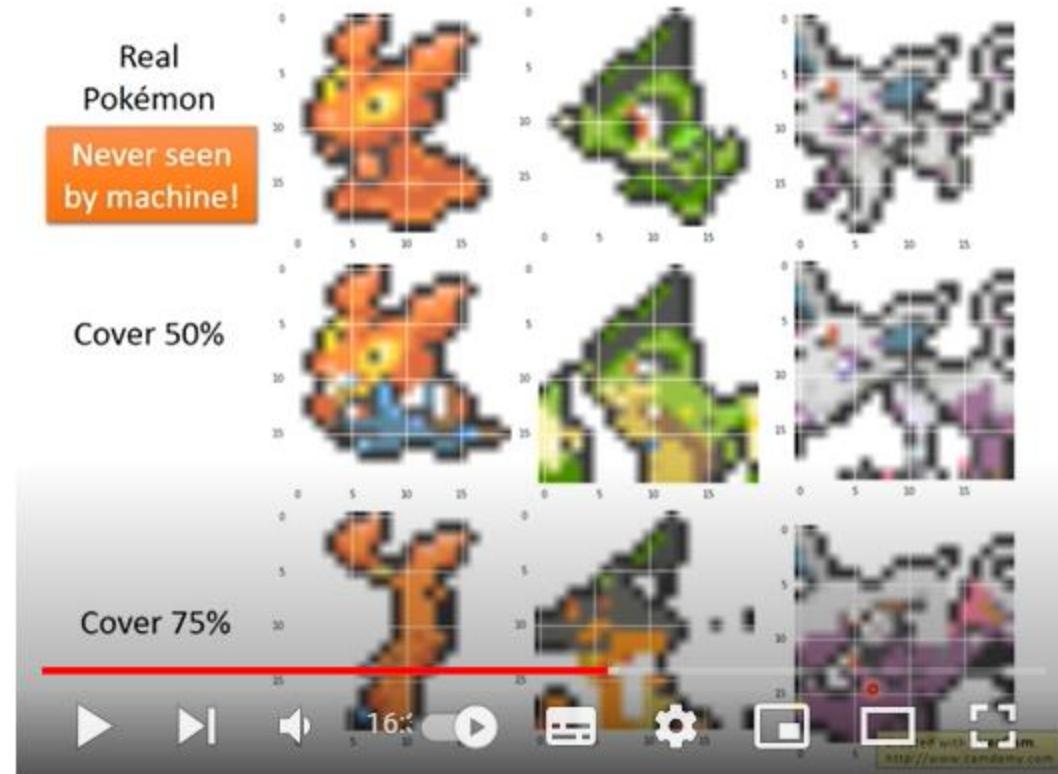

生成的策略 : Autoregressive Generation (AR)

生成的策略 : Autoregressive Generation

生成的策略 : Autoregressive Generation

聲音呢 ?

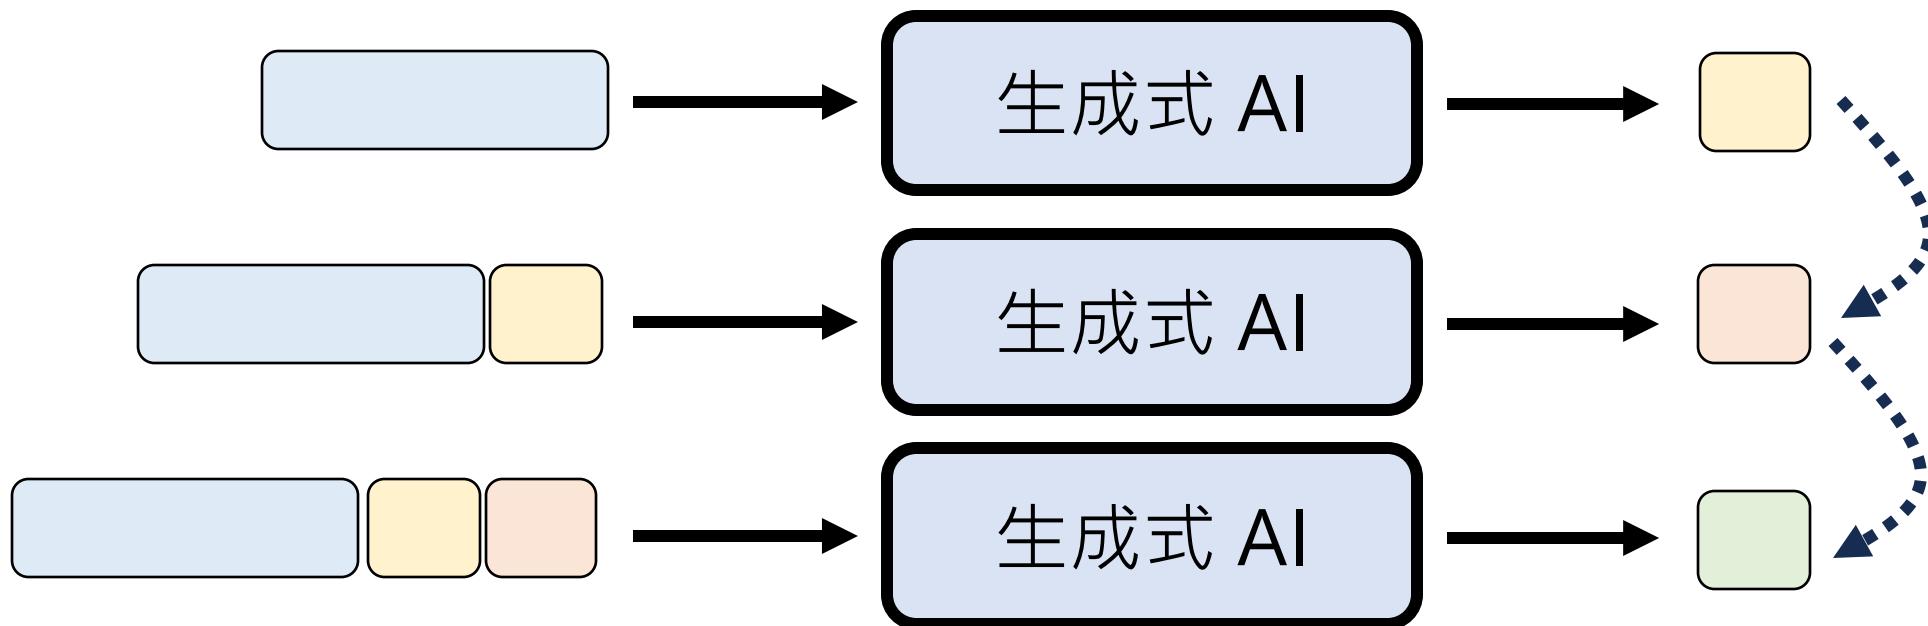

WavNet

<https://arxiv.org/abs/1609.03499>

生成的策略：Autoregressive Generation

- 本質上的限制

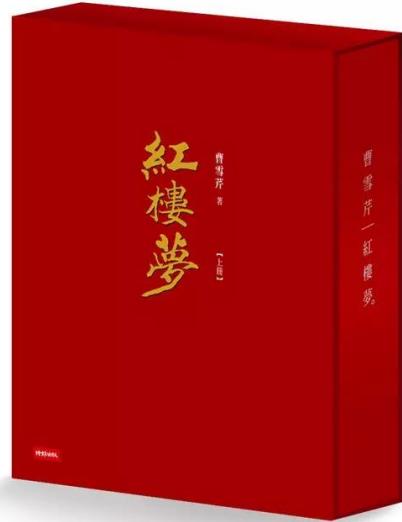

需要按部就班

生成的策略：Autoregressive Generation

- 假設要生成 1024×1024 解析度的圖片

要做約100萬次接龍!

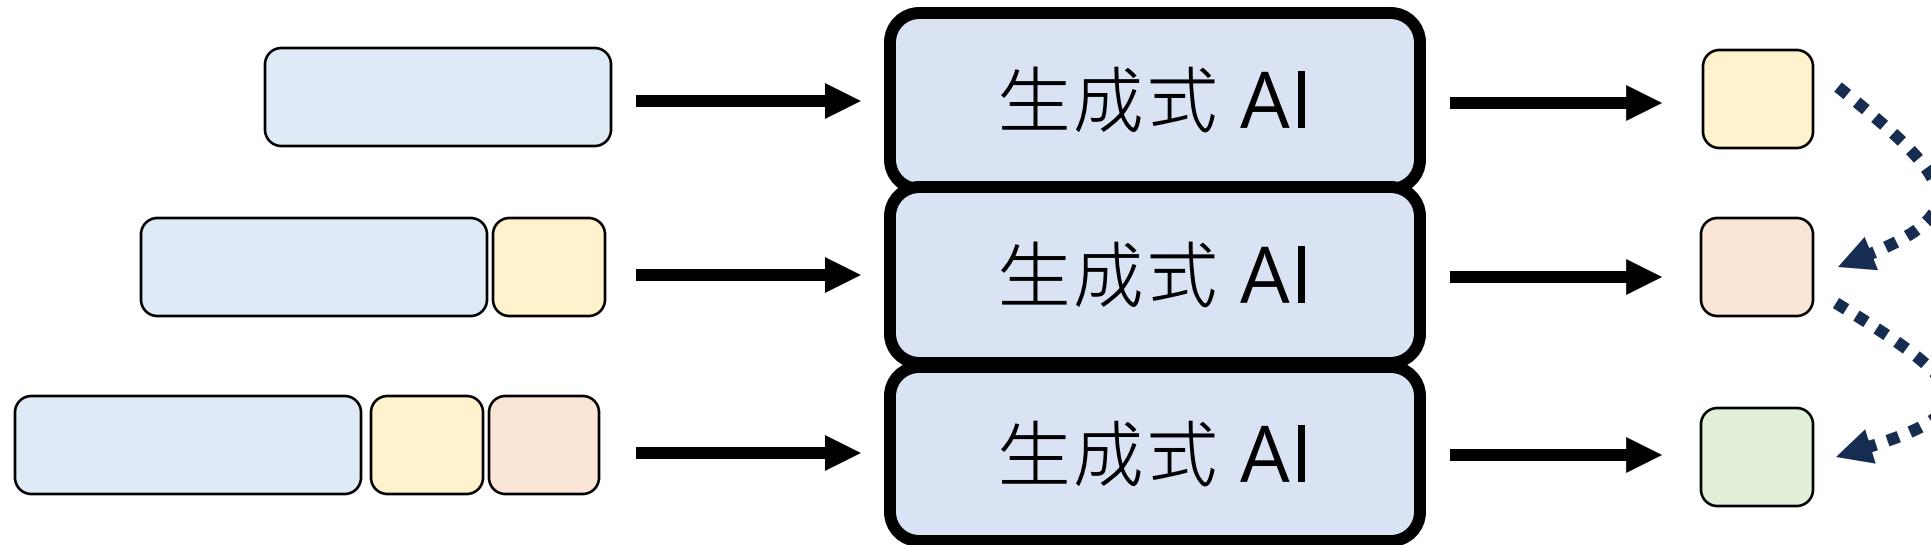

等於每生一張圖片都要寫一部紅樓夢

<https://www.eslite.com/product/1001110932518887>

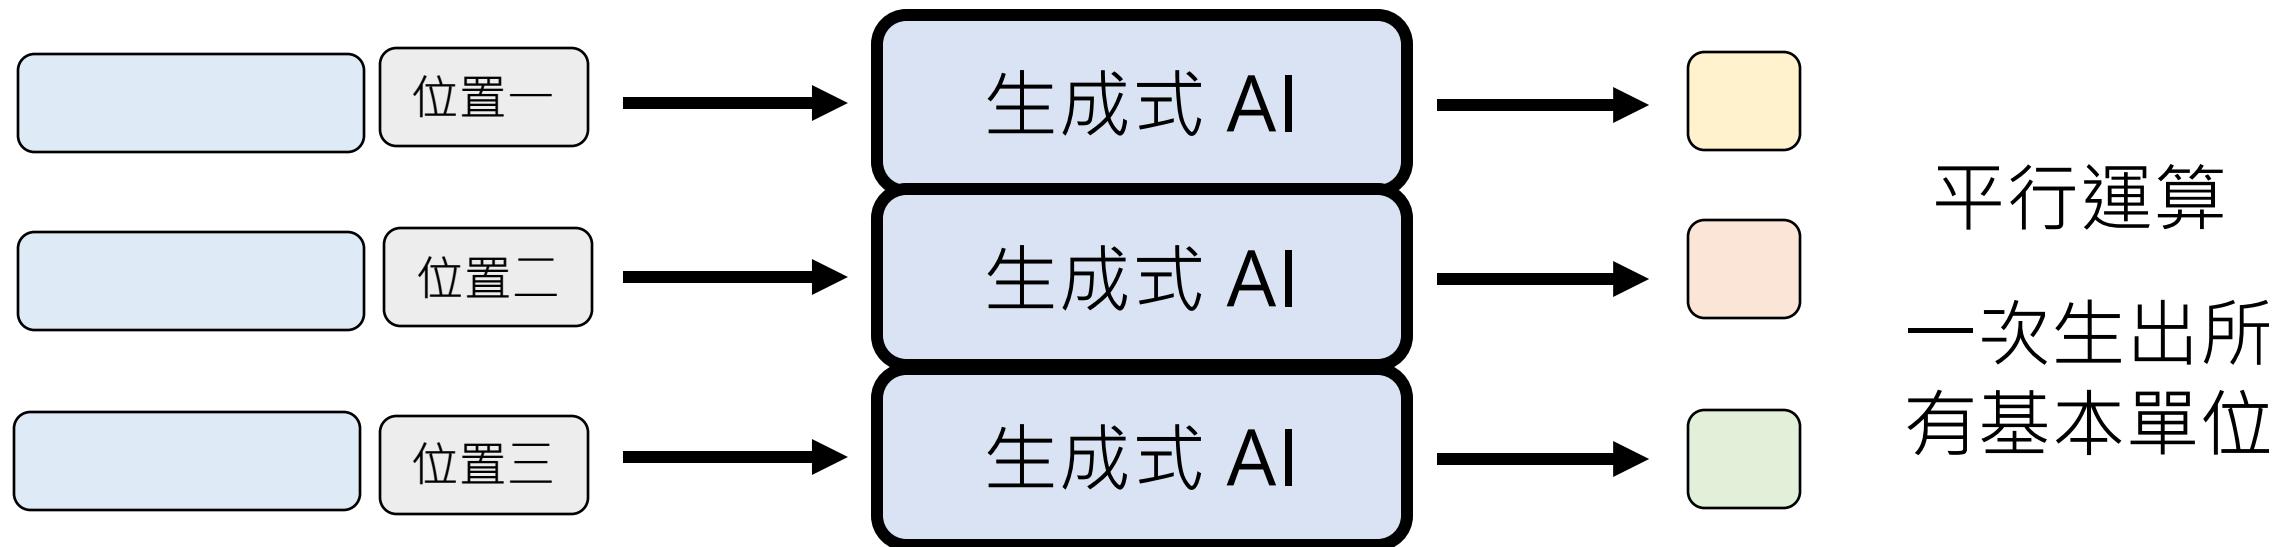

- 假設要生成取樣率 22K 的語音 1 分鐘

要做約132萬次接龍!

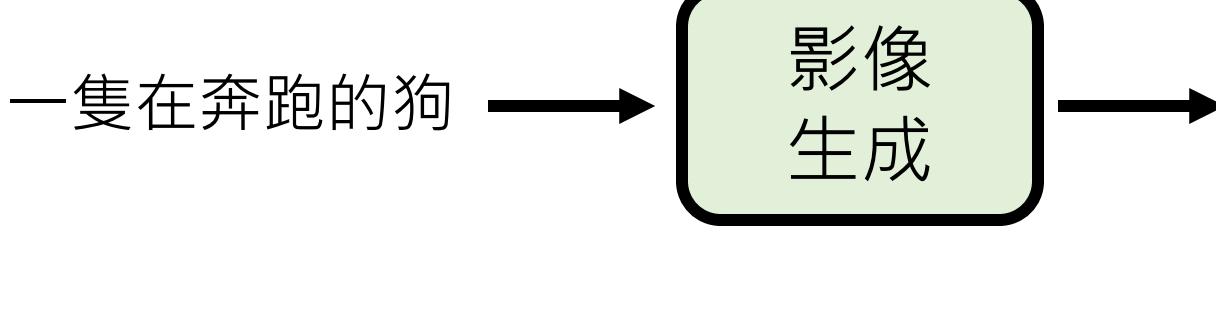

Autoregressive Generation (AR)

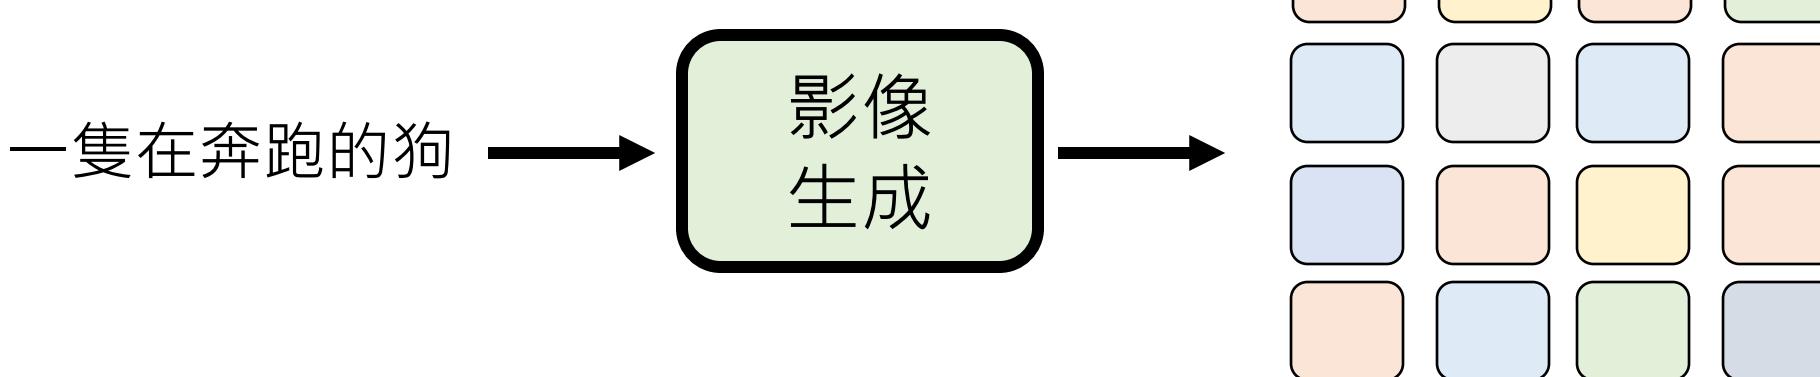

Non-autoregressive Generation (NAR)

Autoregressive Generation (AR)

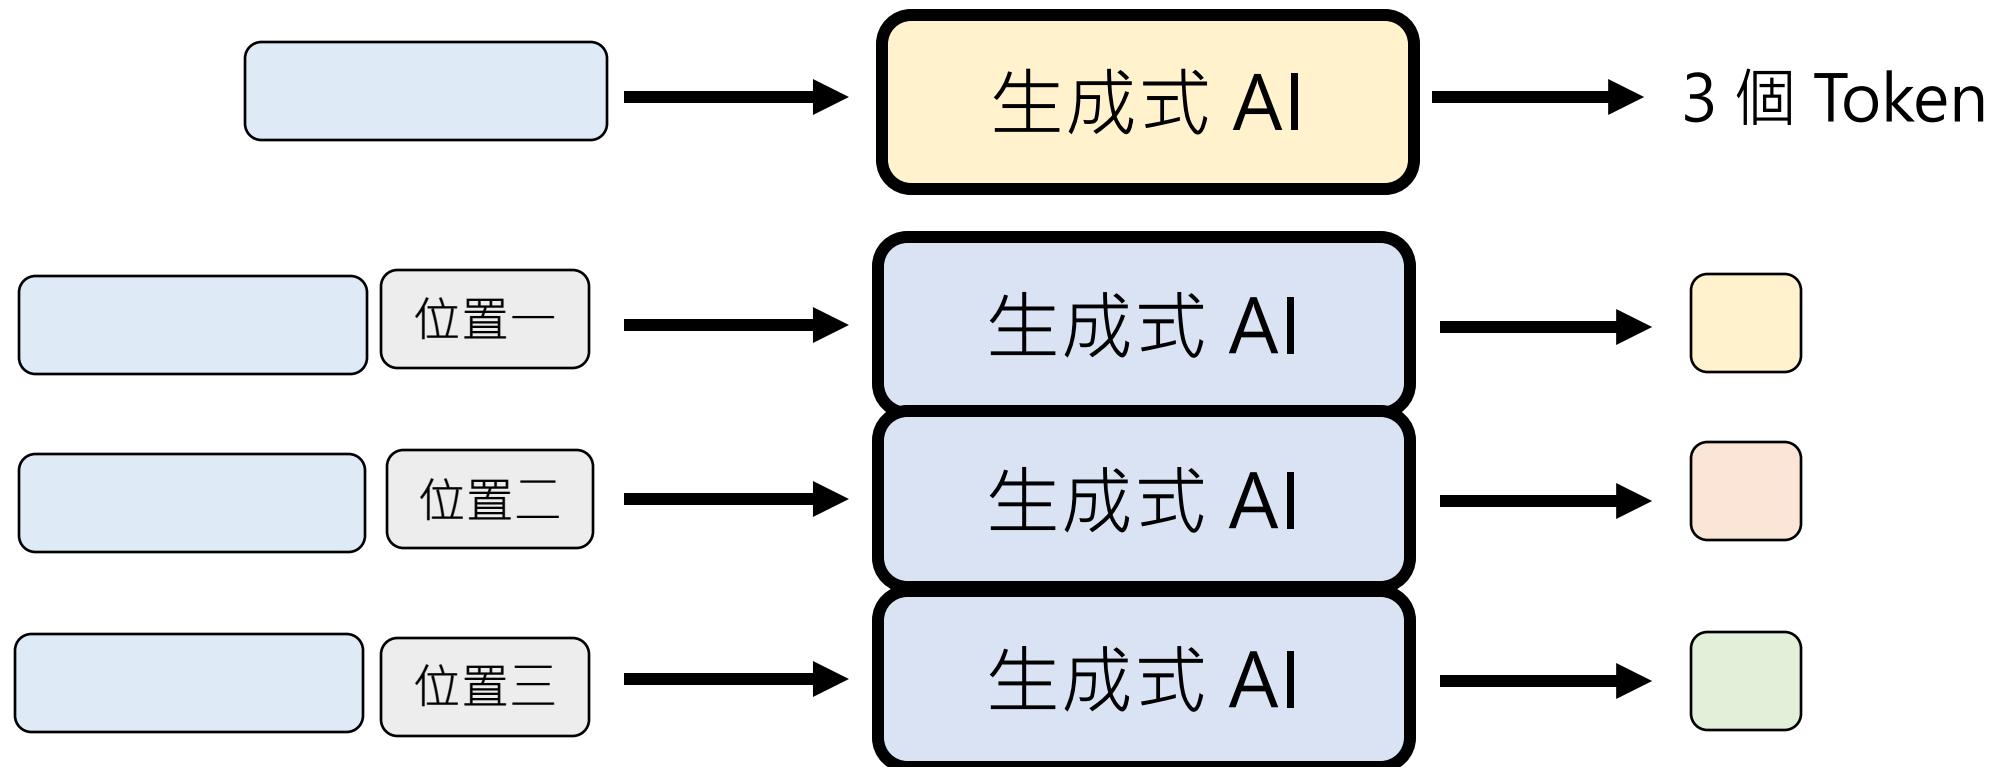

Non-autoregressive Generation (NAR)

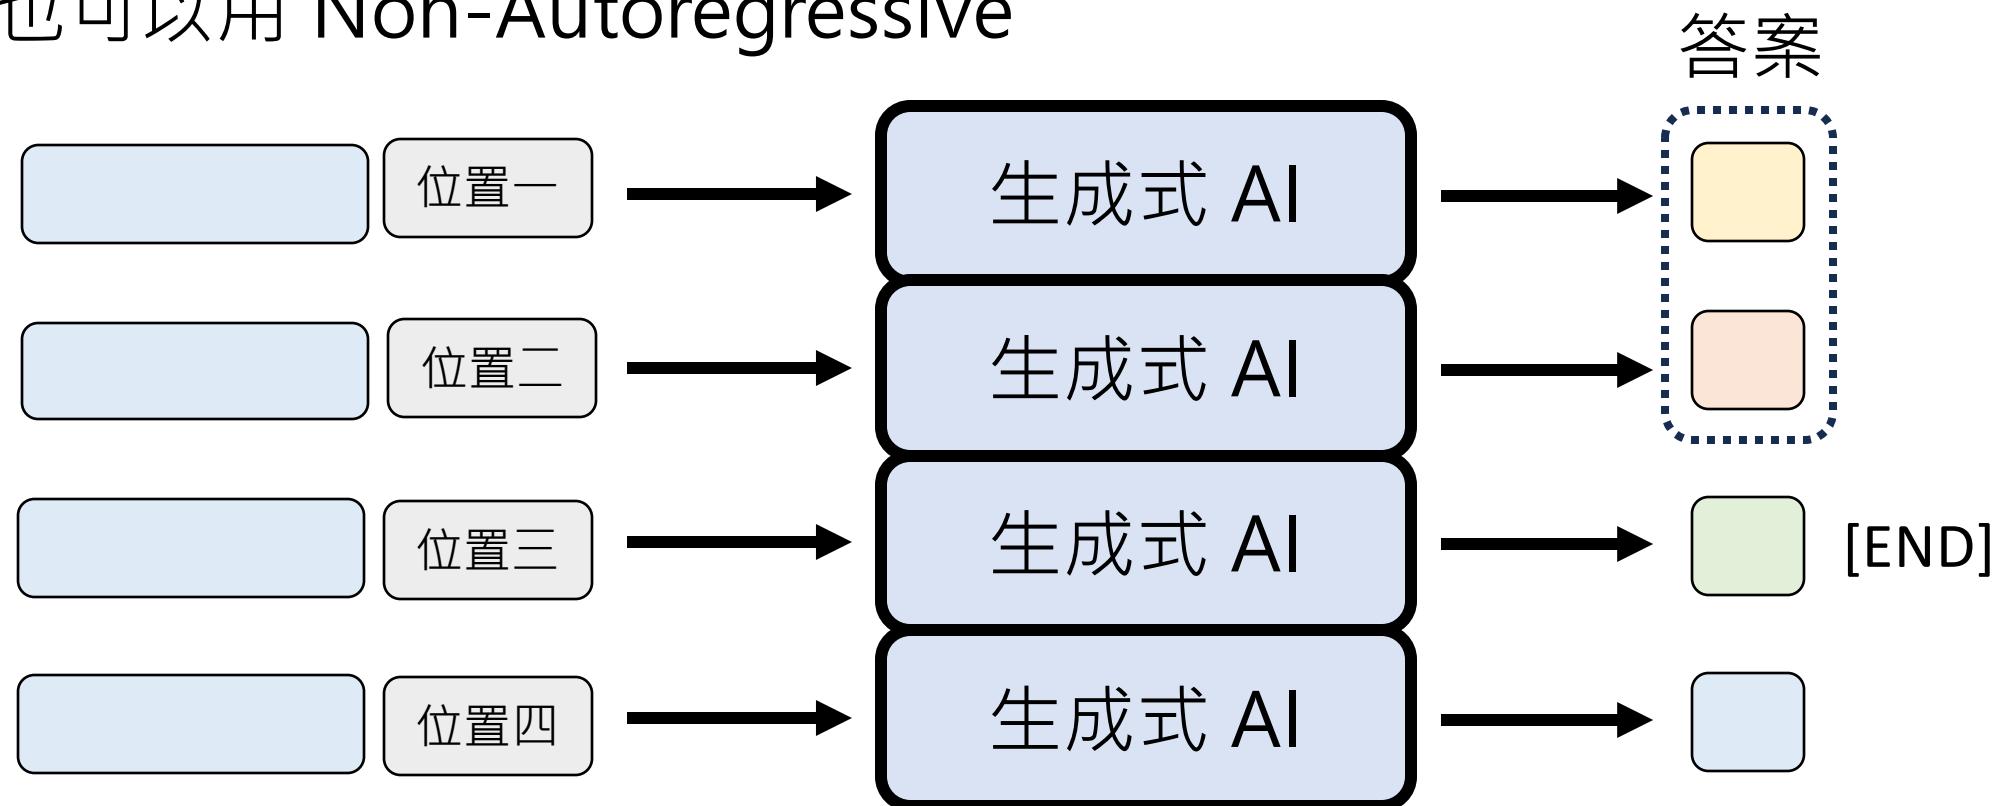

Non-Autoregressive Generation

- 文字也可以用 Non-Autoregressive

Non-Autoregressive Generation

- 文字也可以用 Non-Autoregressive

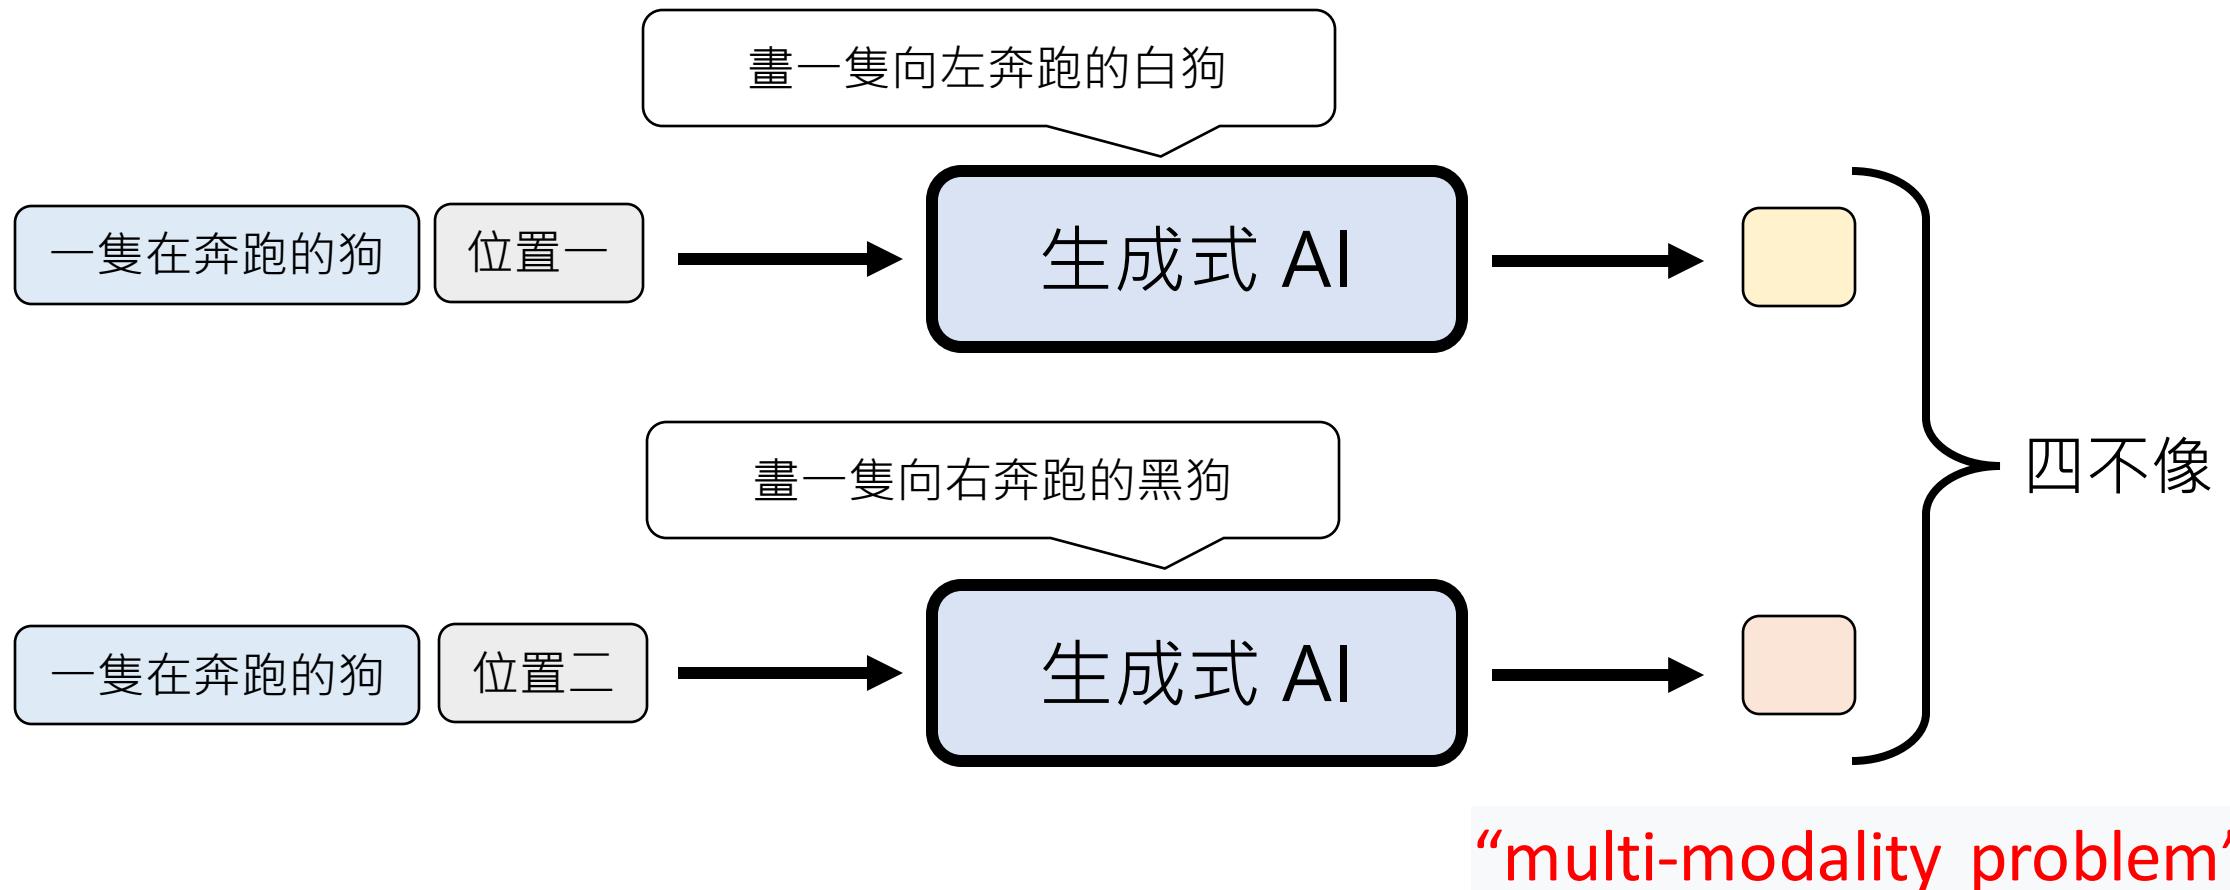

反正就是生成固定長度

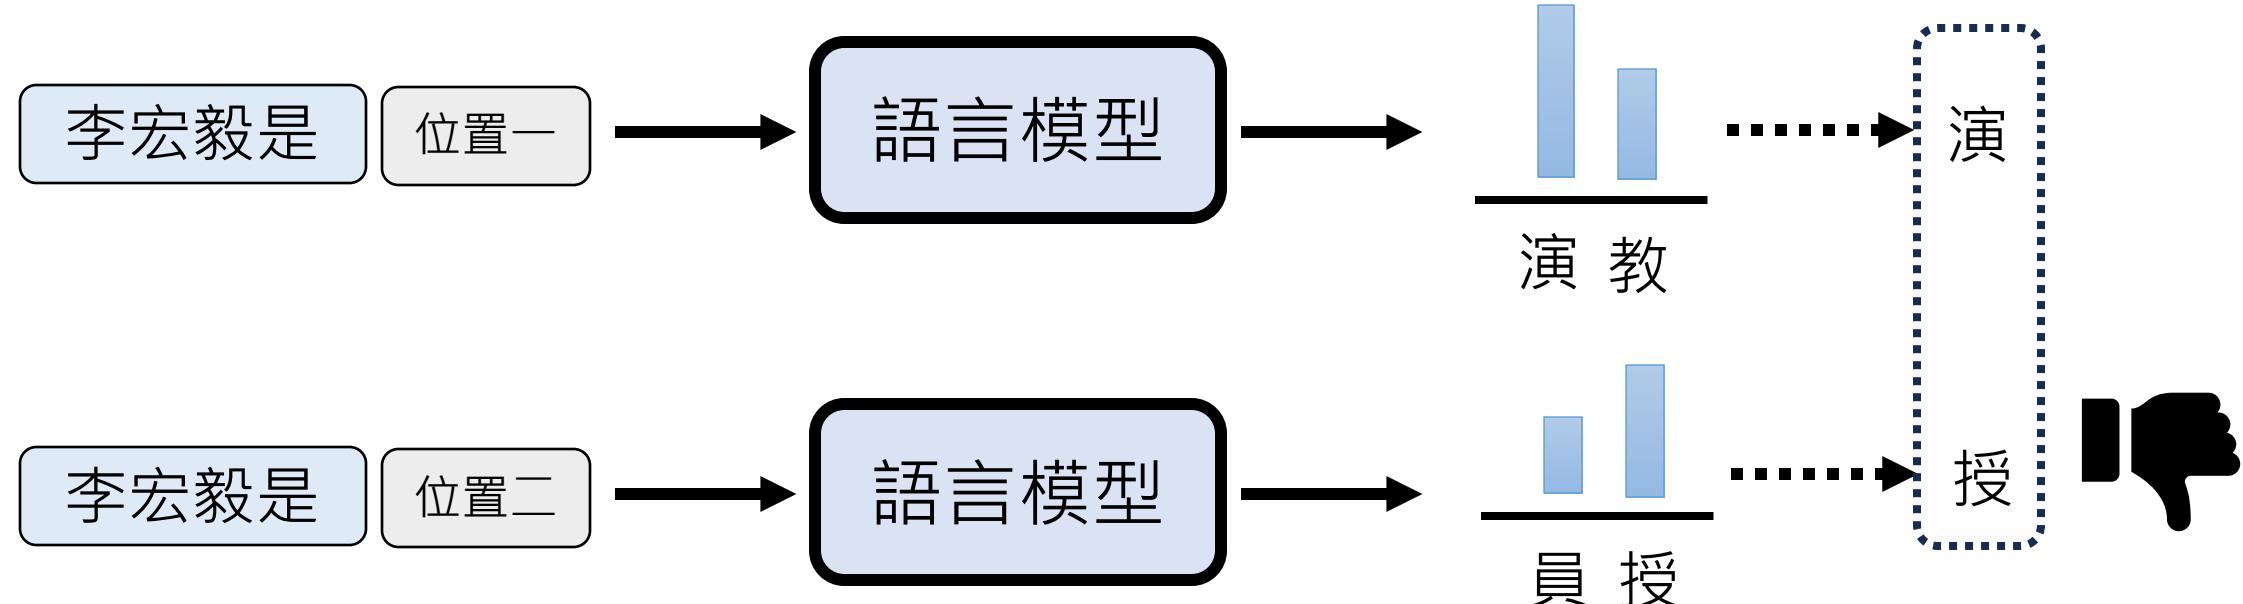

Survey paper: <https://arxiv.org/pdf/2204.09269>

Non-Autoregressive Generation 的品質問題

- 生成往往需要AI自行腦補，給定條件仍有很多不同可能的輸出

Non-autoregressive Generation

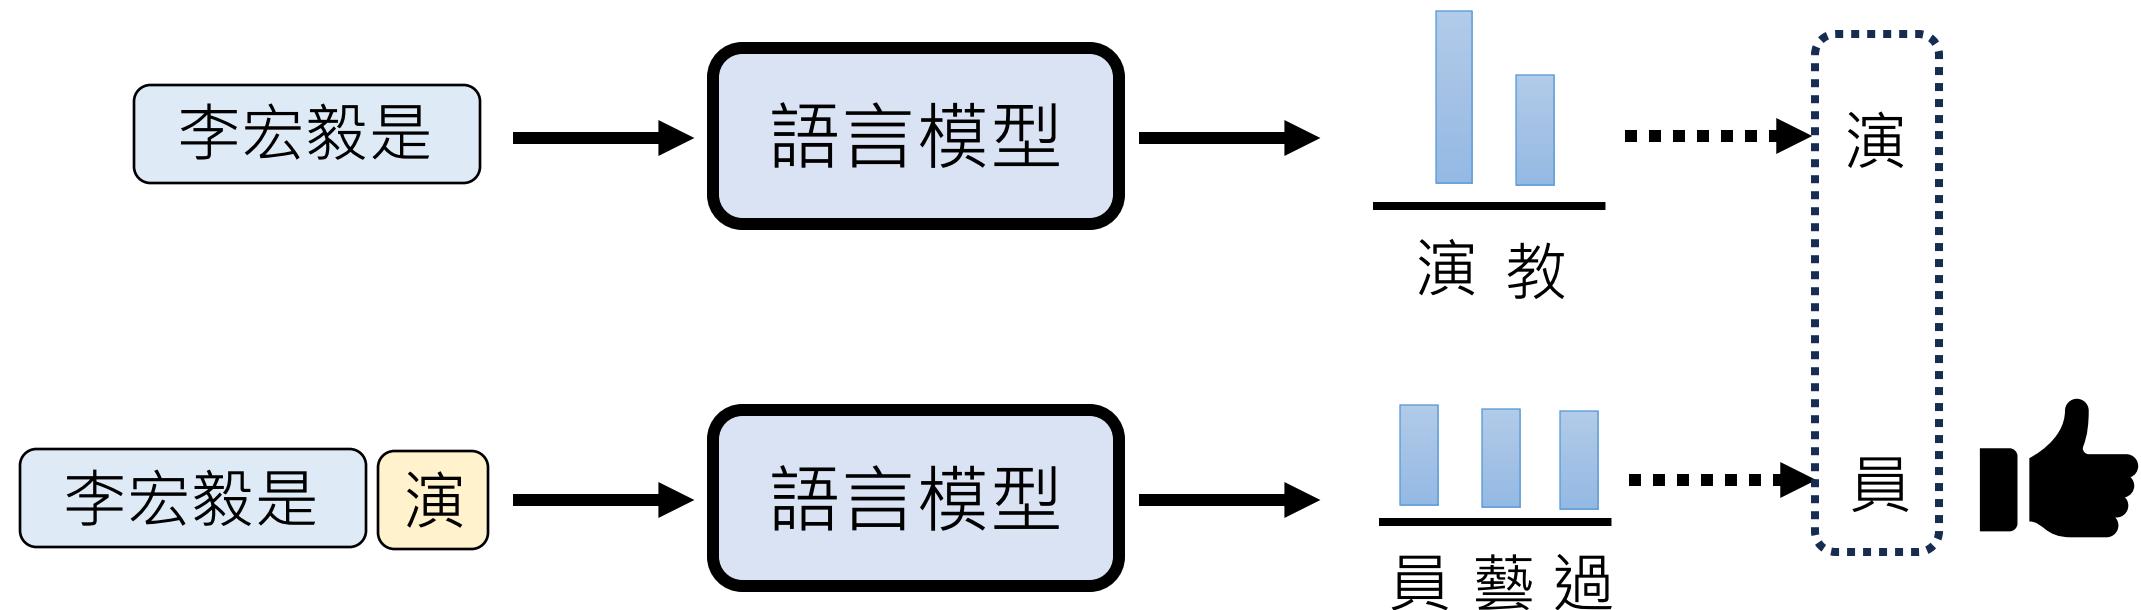

李宏毅是演員

Non-Autoregressive Generation 的品質問題

- 讓所有位置都腦補一樣的內容

Non-Autoregressive Generation 的品質問題

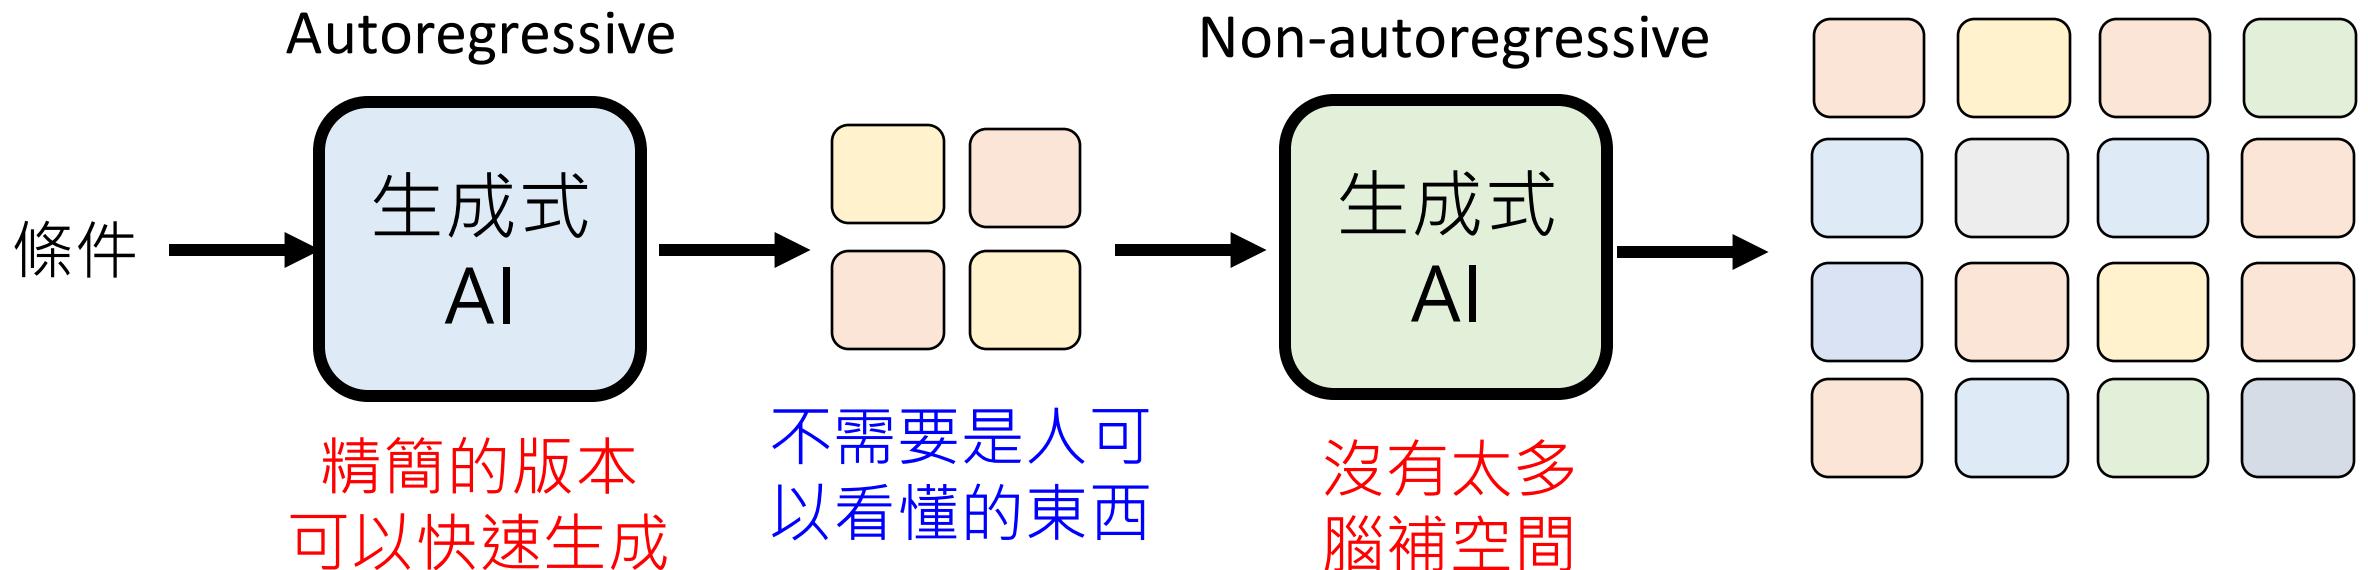

- 讓所有位置都腦補一樣的內容

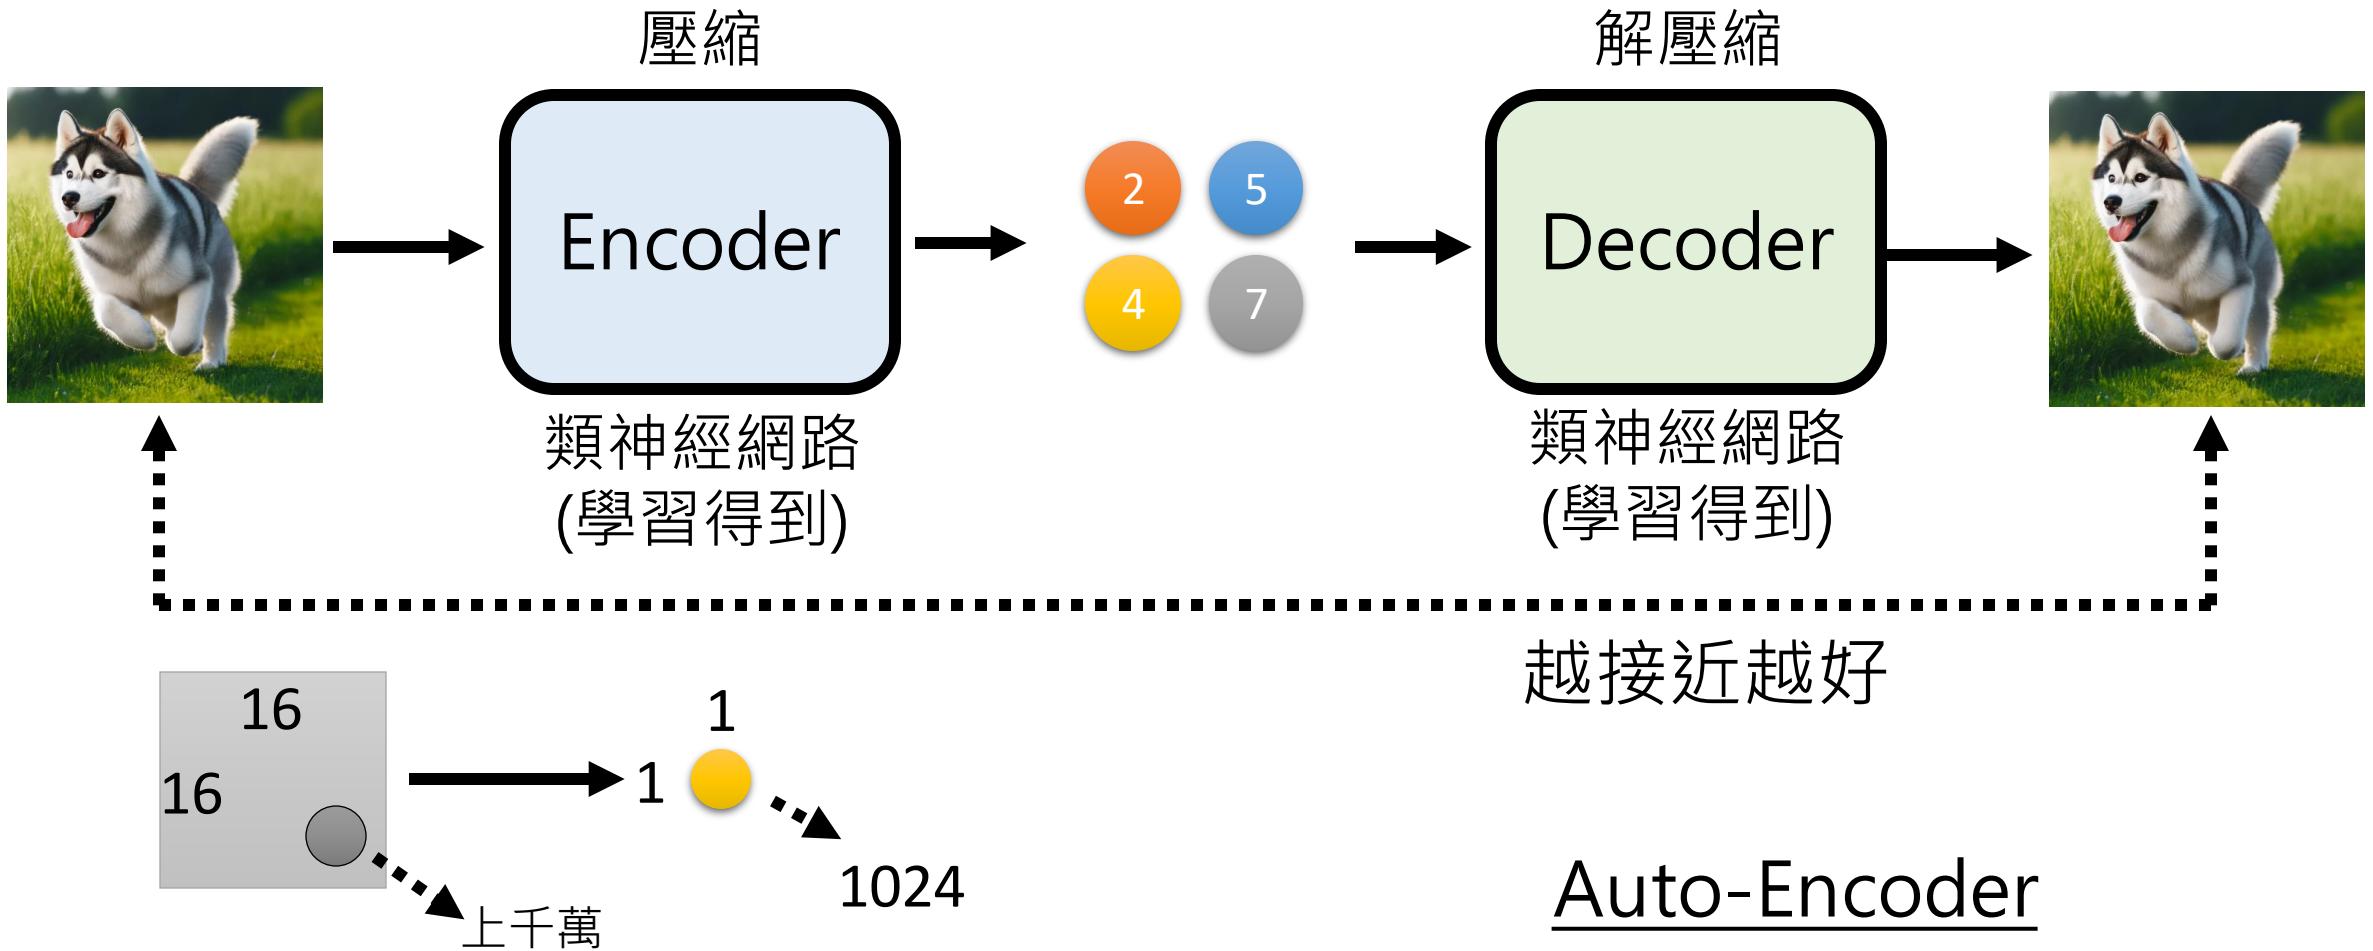

影像常用生成模型 VAE, GAN, Flow-based Model, Diffusion Model 都有這樣的設計

Autoregressive + Non-autoregressive

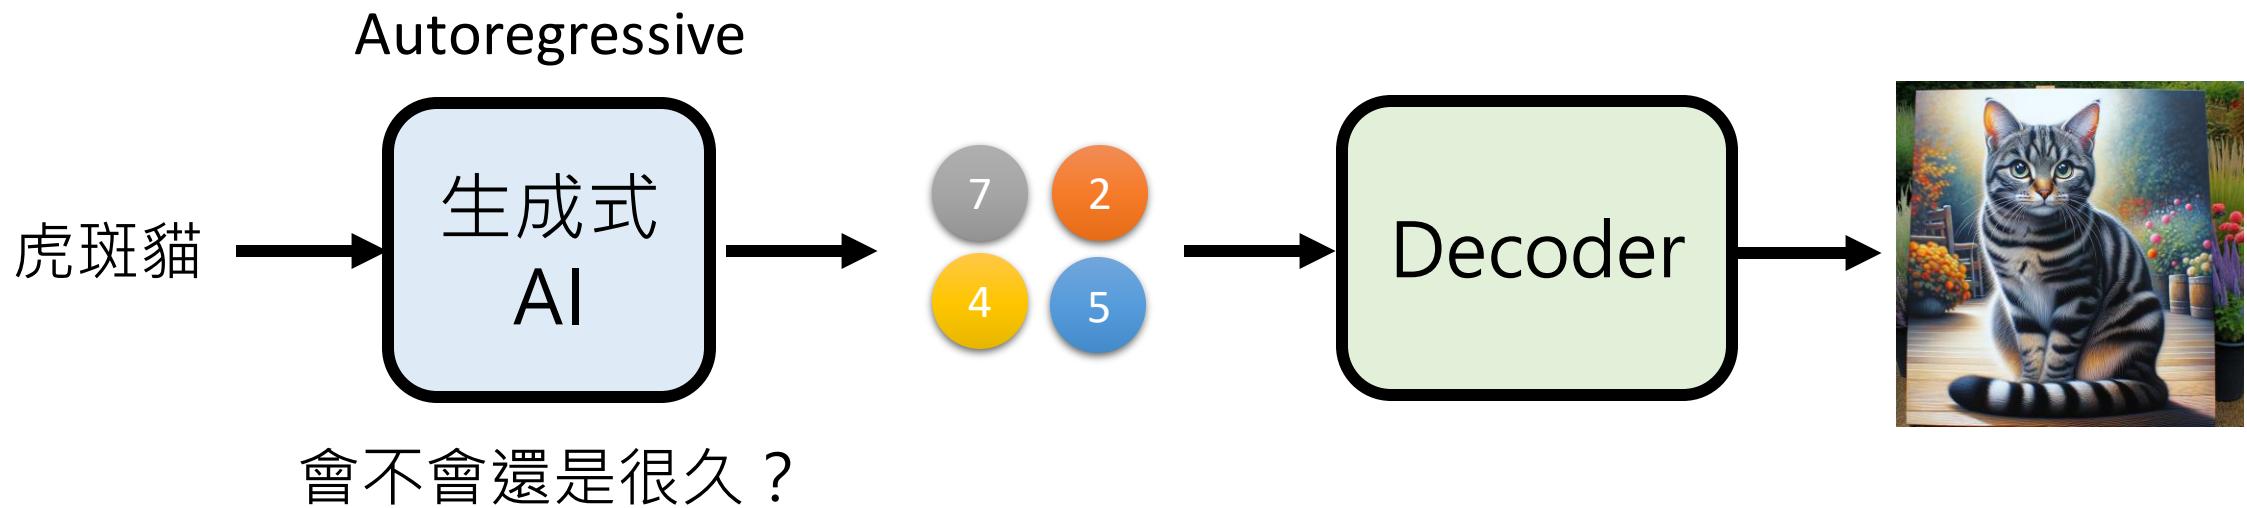

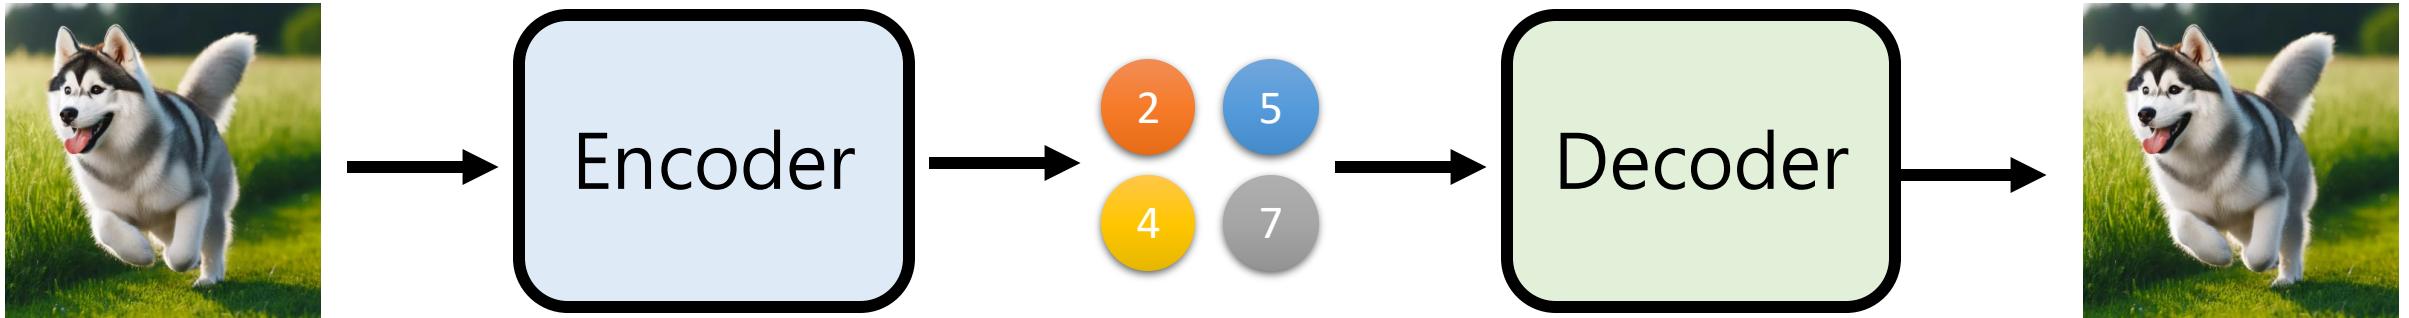

- 先用 Autoregressive 生成一個精簡的版本，再用 Non-autoregressive 生成產生精細的版本

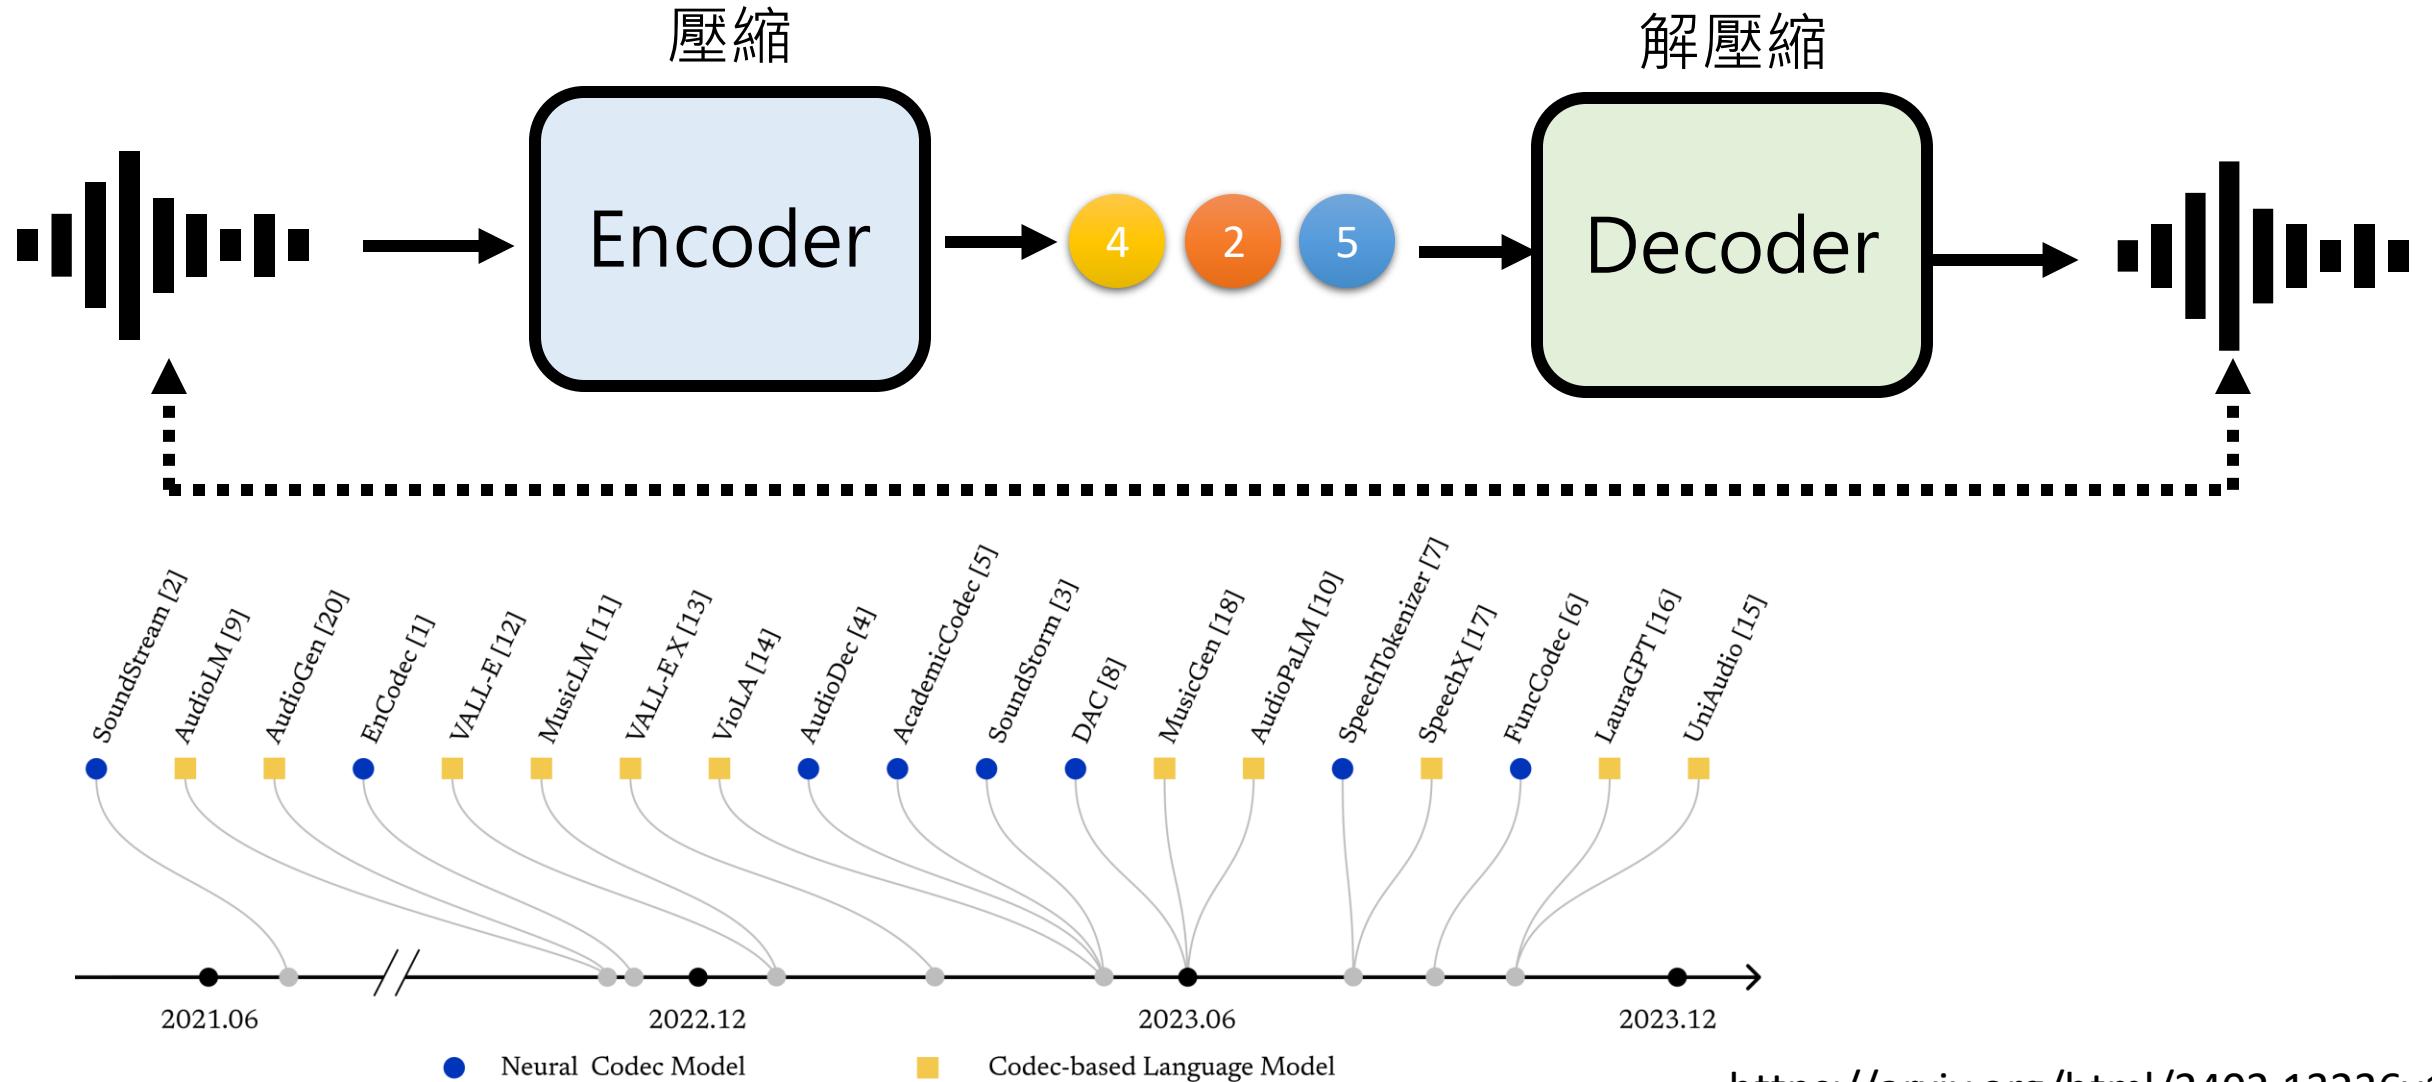

Autoregressive + Non-autoregressive

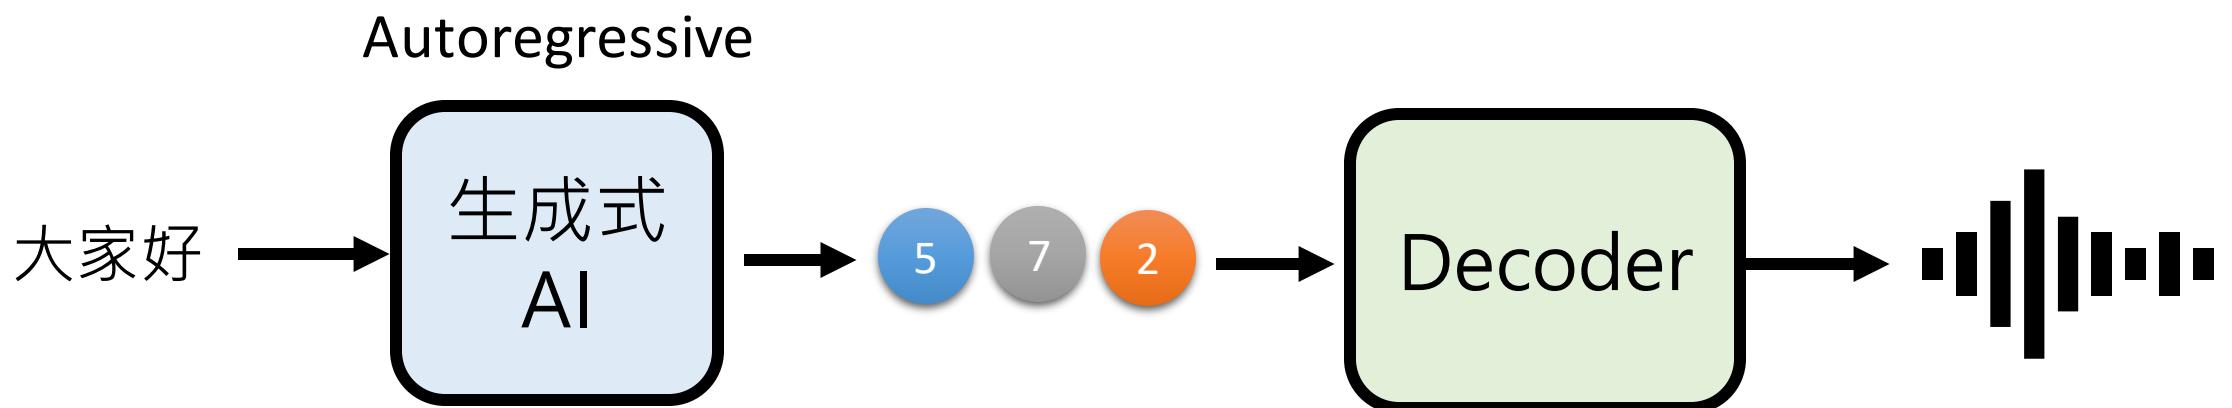

Autoregressive + Non-autoregressive

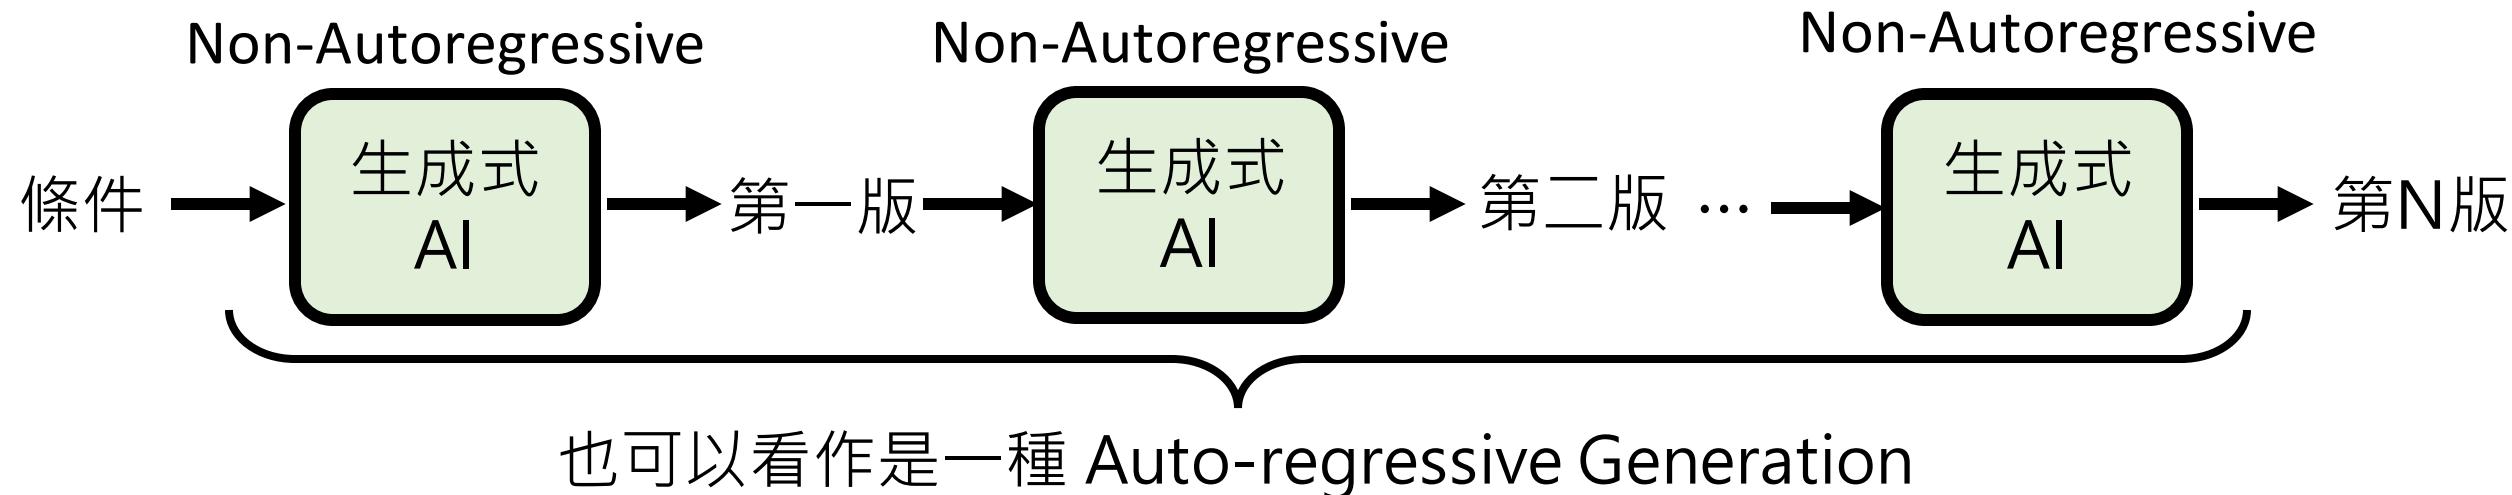

Autoregressive + Non-autoregressive

Autoregressive + Non-autoregressive

多次 Non-Autoregressive Generation

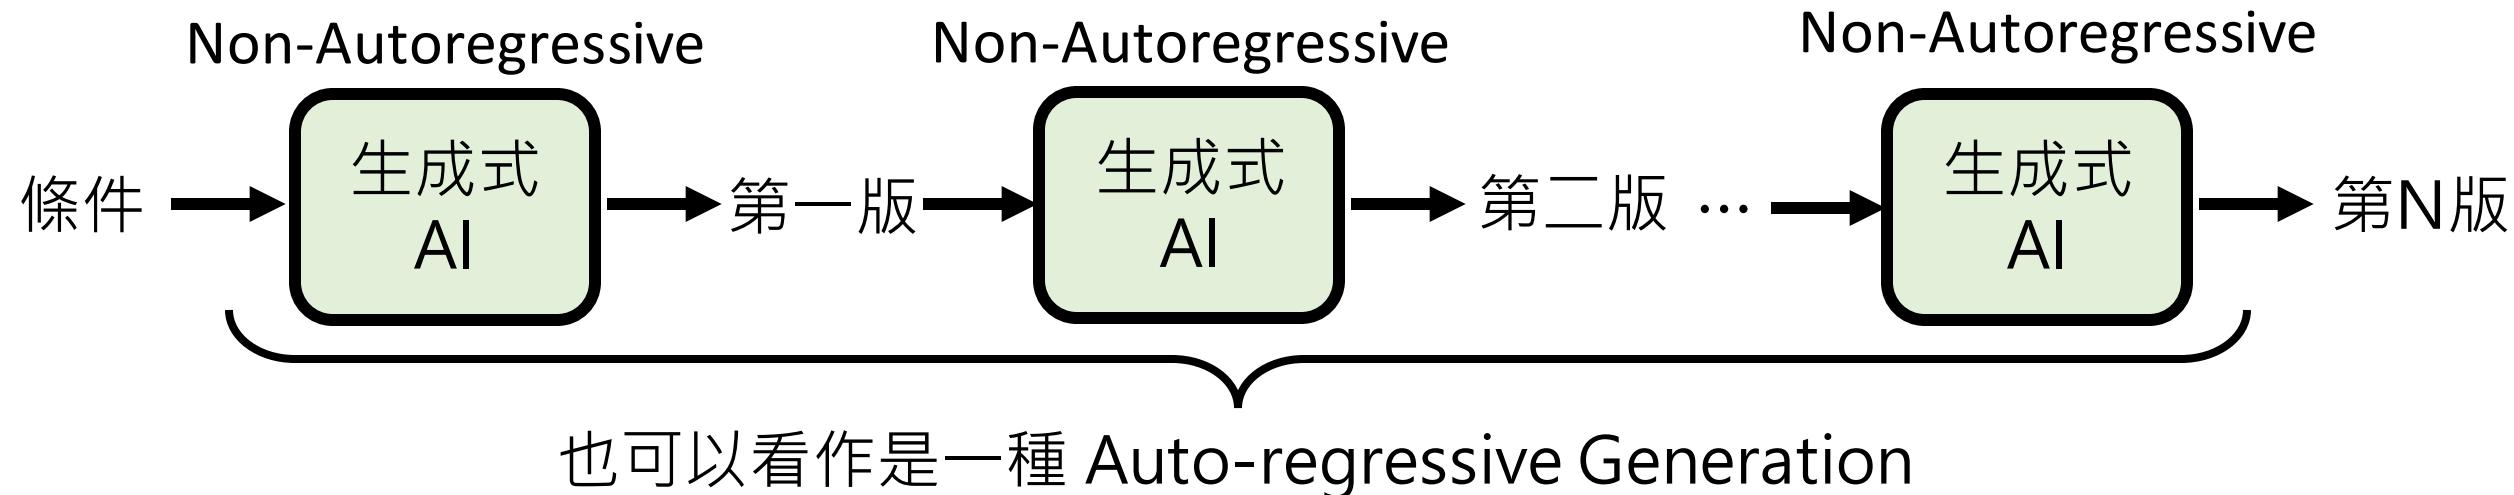

由小圖到大圖

<https://arxiv.org/abs/2205.11487>
<https://arxiv.org/pdf/1710.10196>

多次 Non-Autoregressive Generation

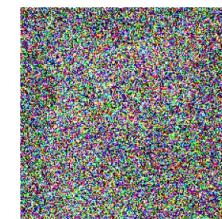

從有雜訊到沒有雜訊

Diffusion Model

<https://arxiv.org/abs/2006.11239>

第一版

第二版

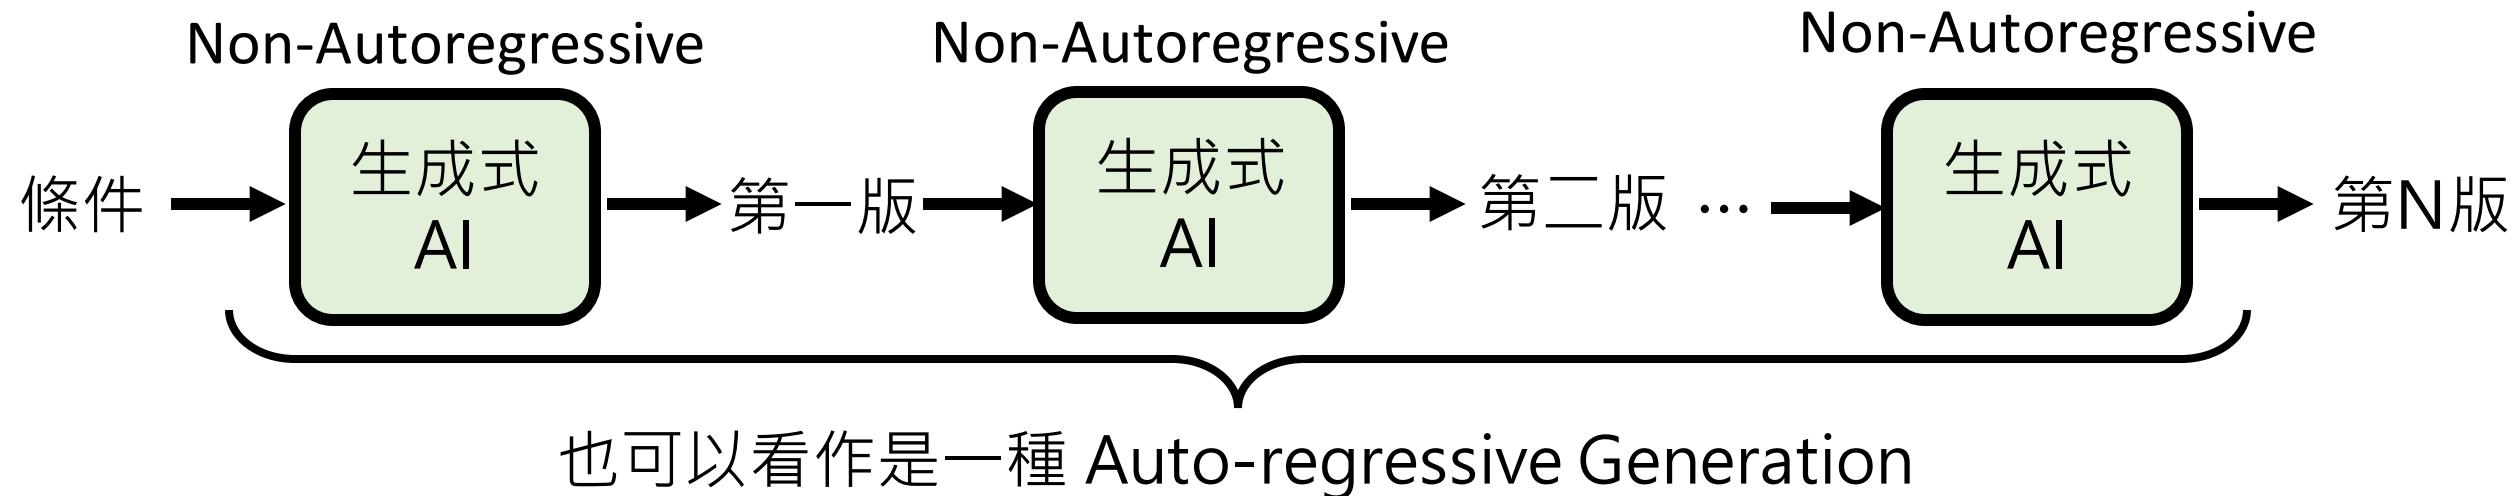

.....

第N版

多次 Non-Autoregressive Generation

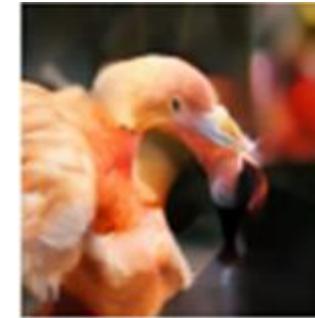

每次把生不好的
地方塗掉

<https://arxiv.org/abs/2202.04200>

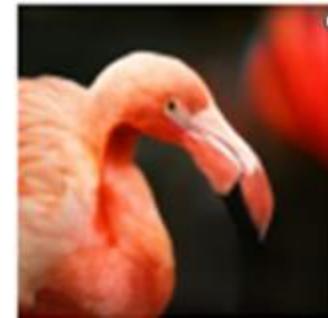

第一版

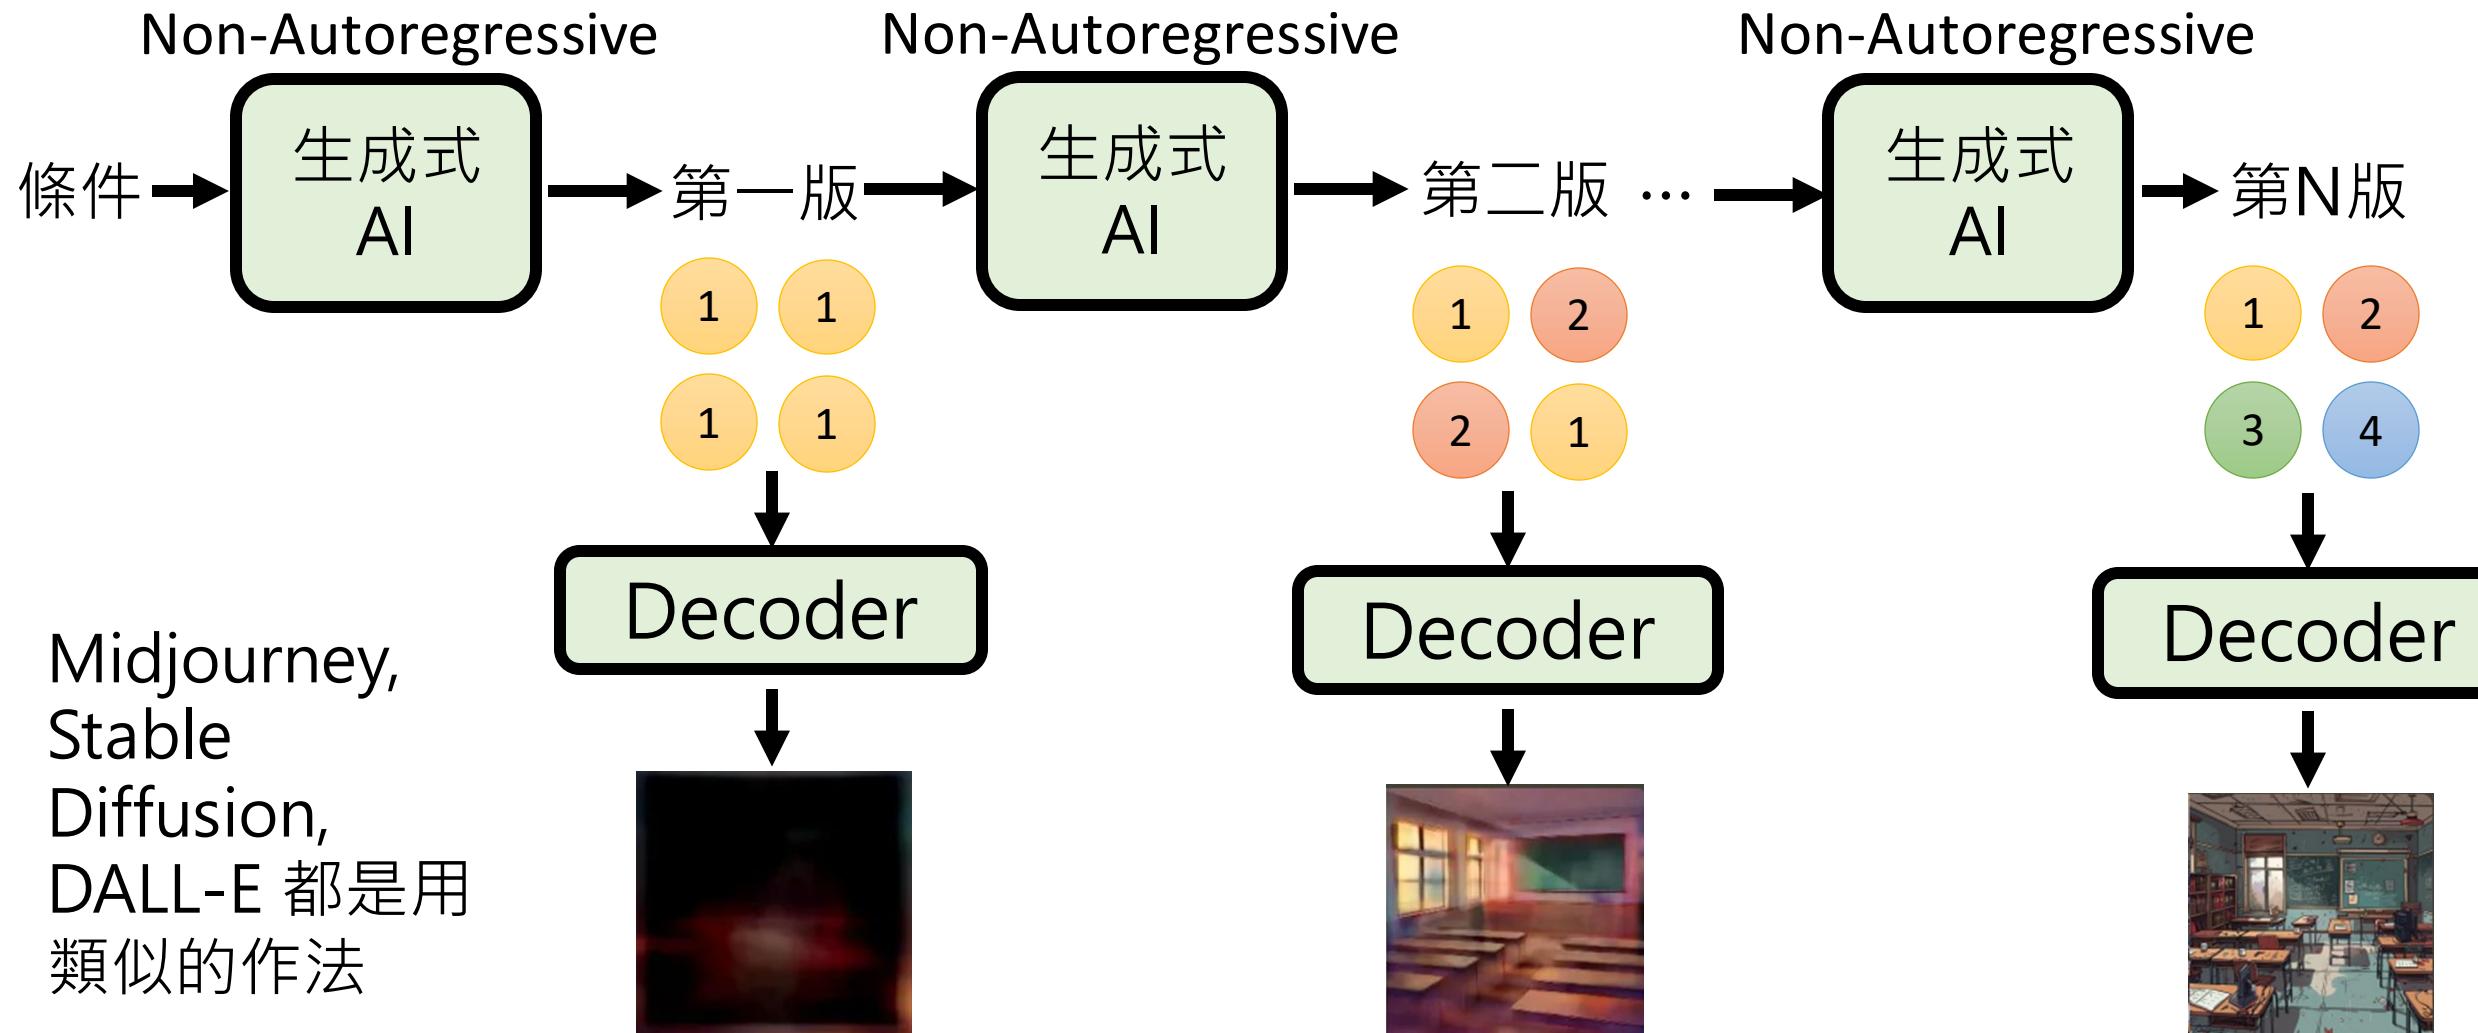

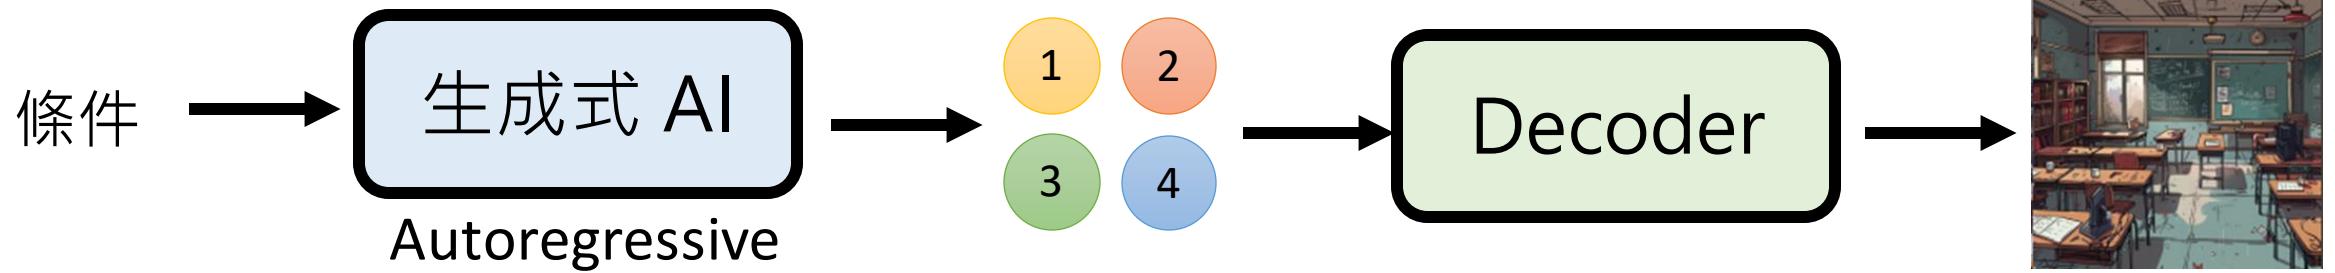

第二版

第N版

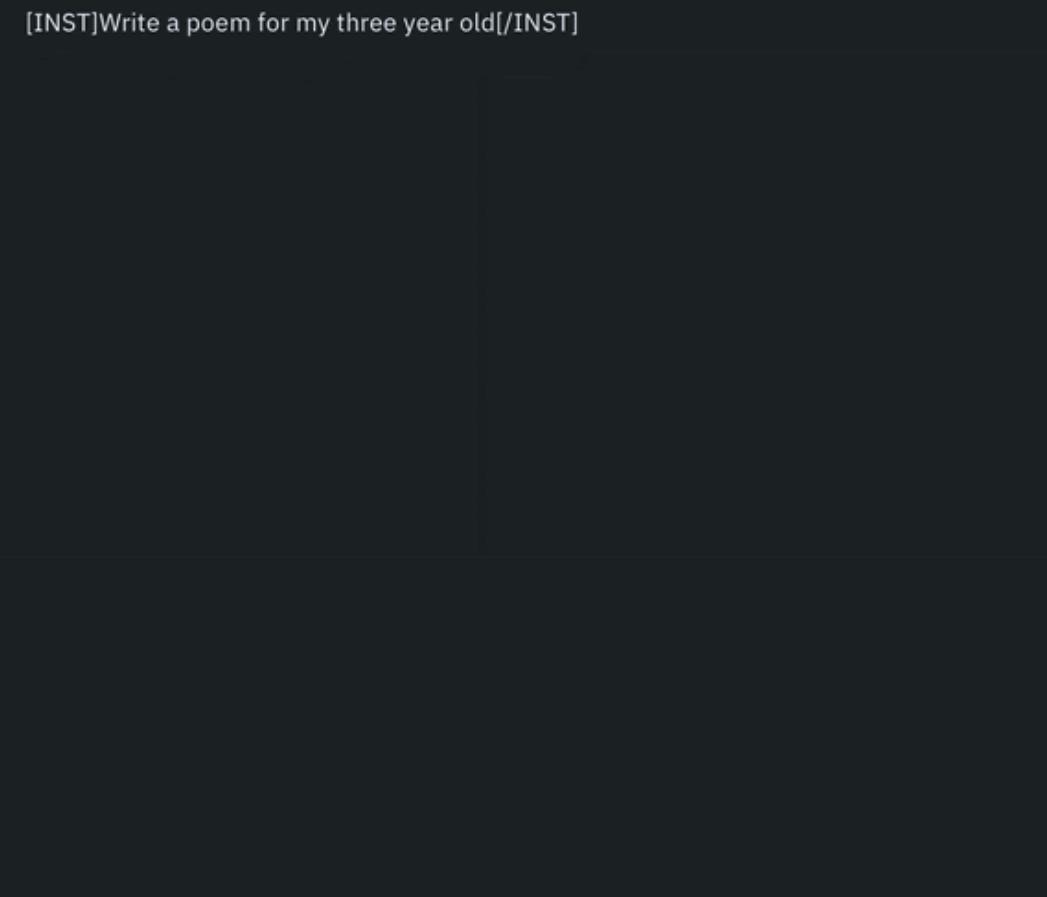

小結

	Autoregressive, AR	Non-autoregressive, NAR
特性	按部就班、各個擊破	齊頭並進、一次到位
速度		勝
品質	勝	
應用	常用於文字	常用於影像

有很多方法讓兩種策略可以截長補短

覺得現在語言模型還不夠快嗎？

預言家

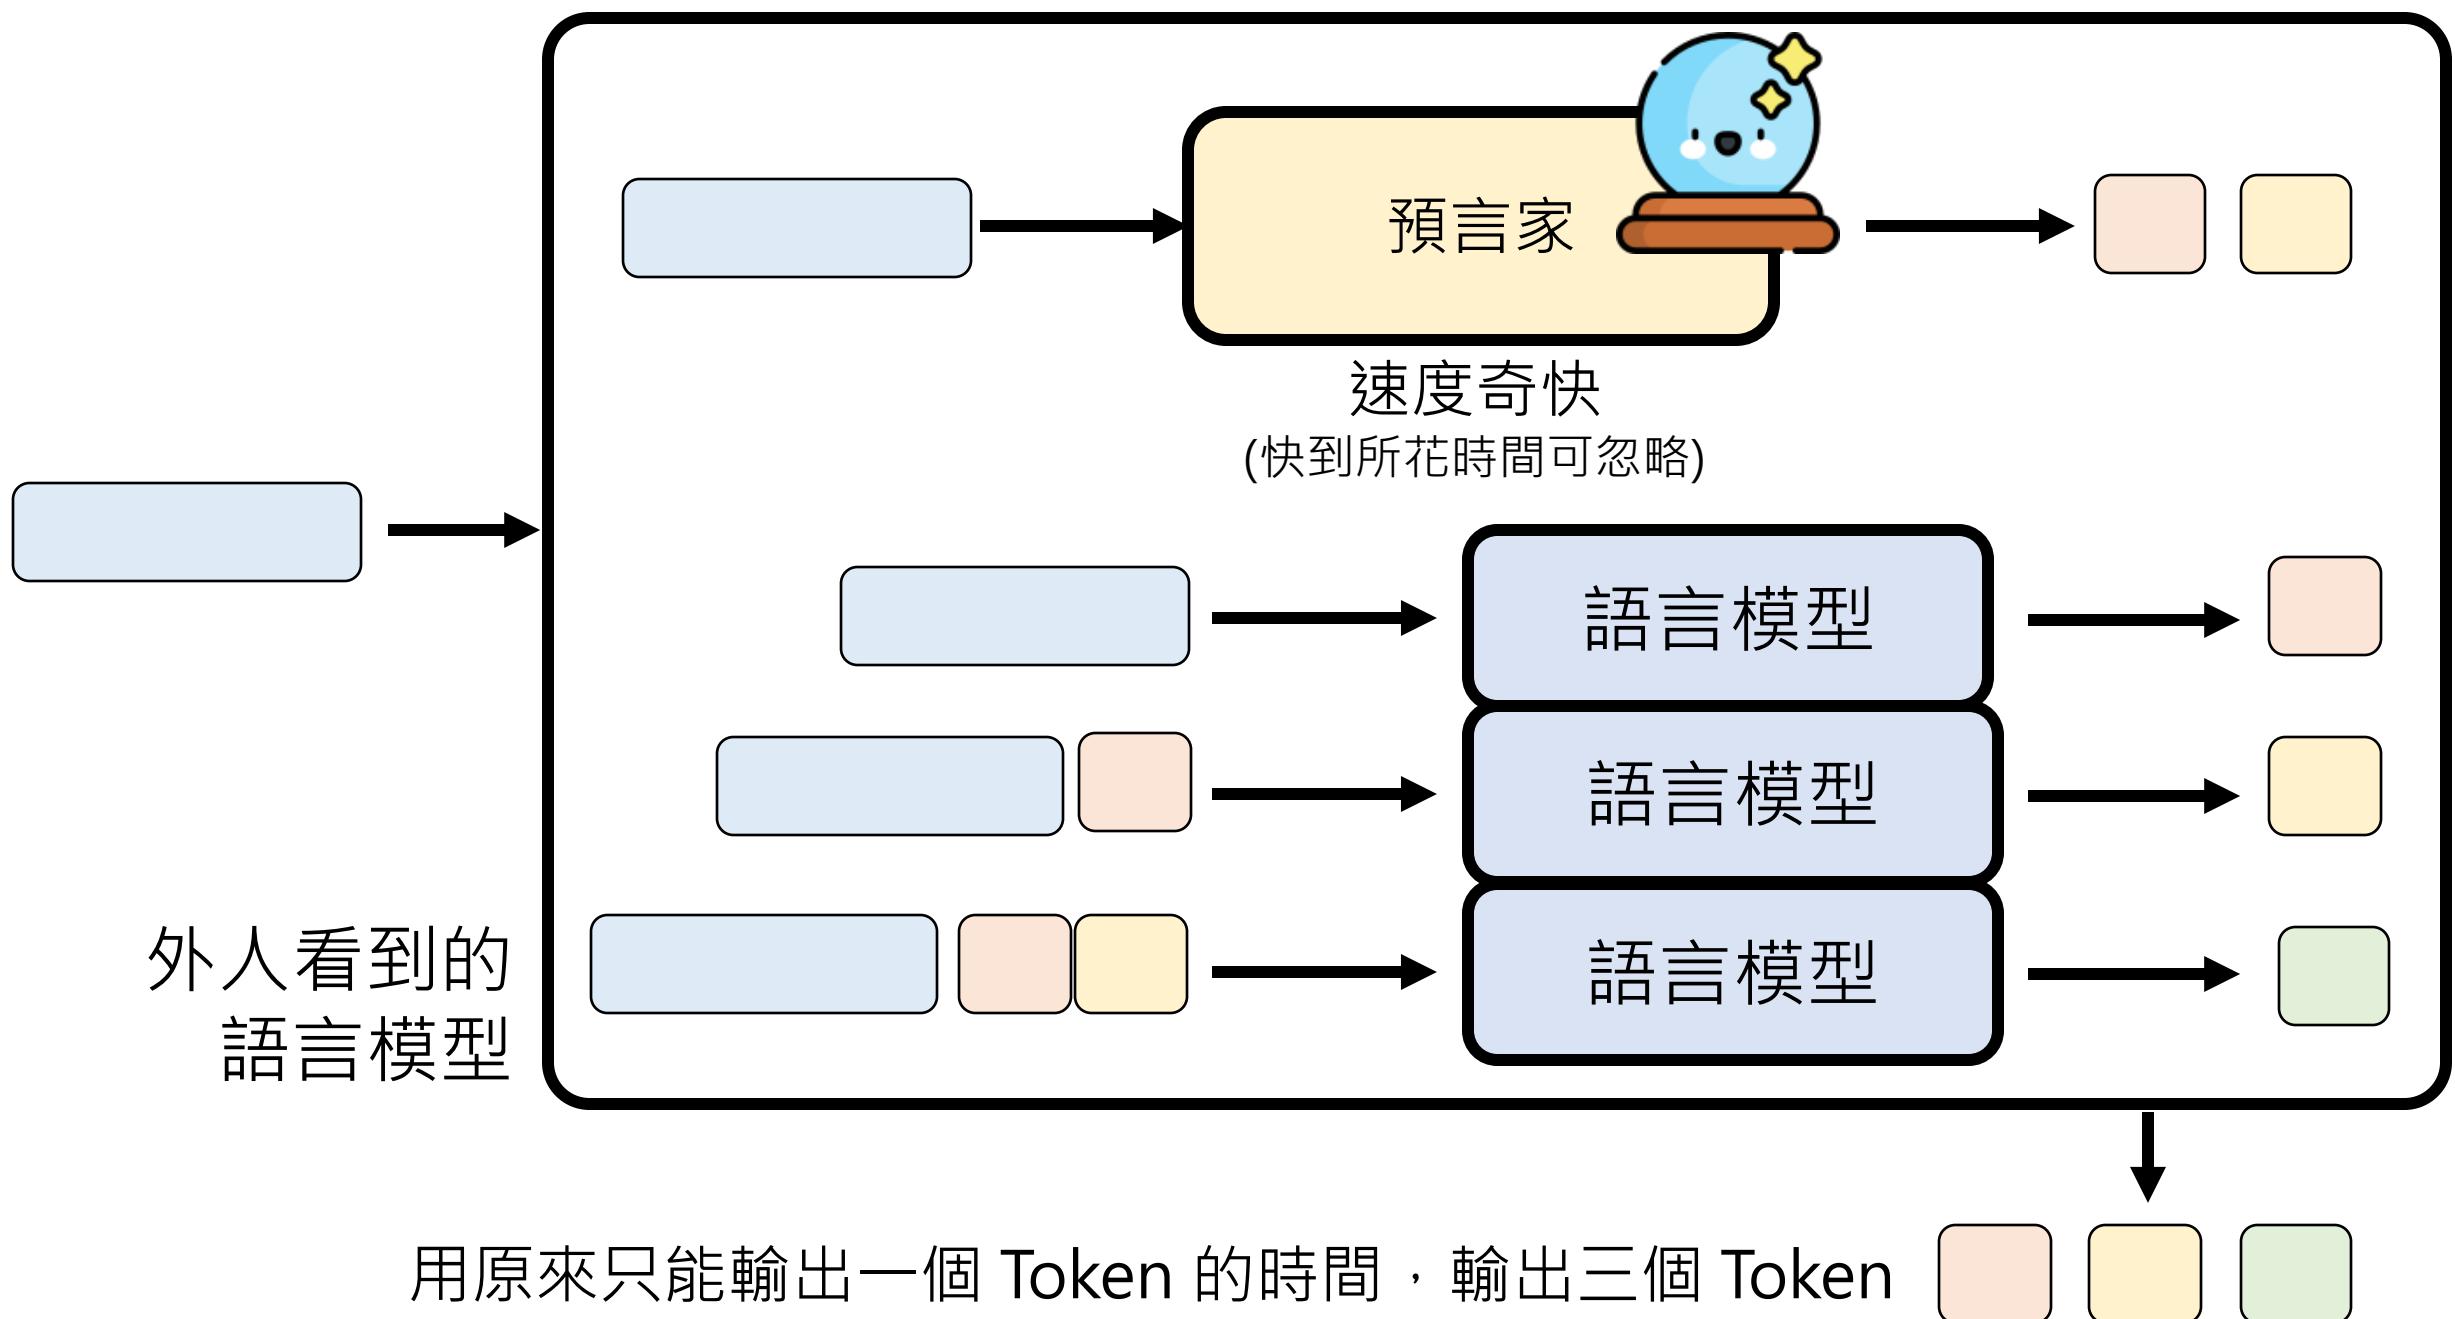

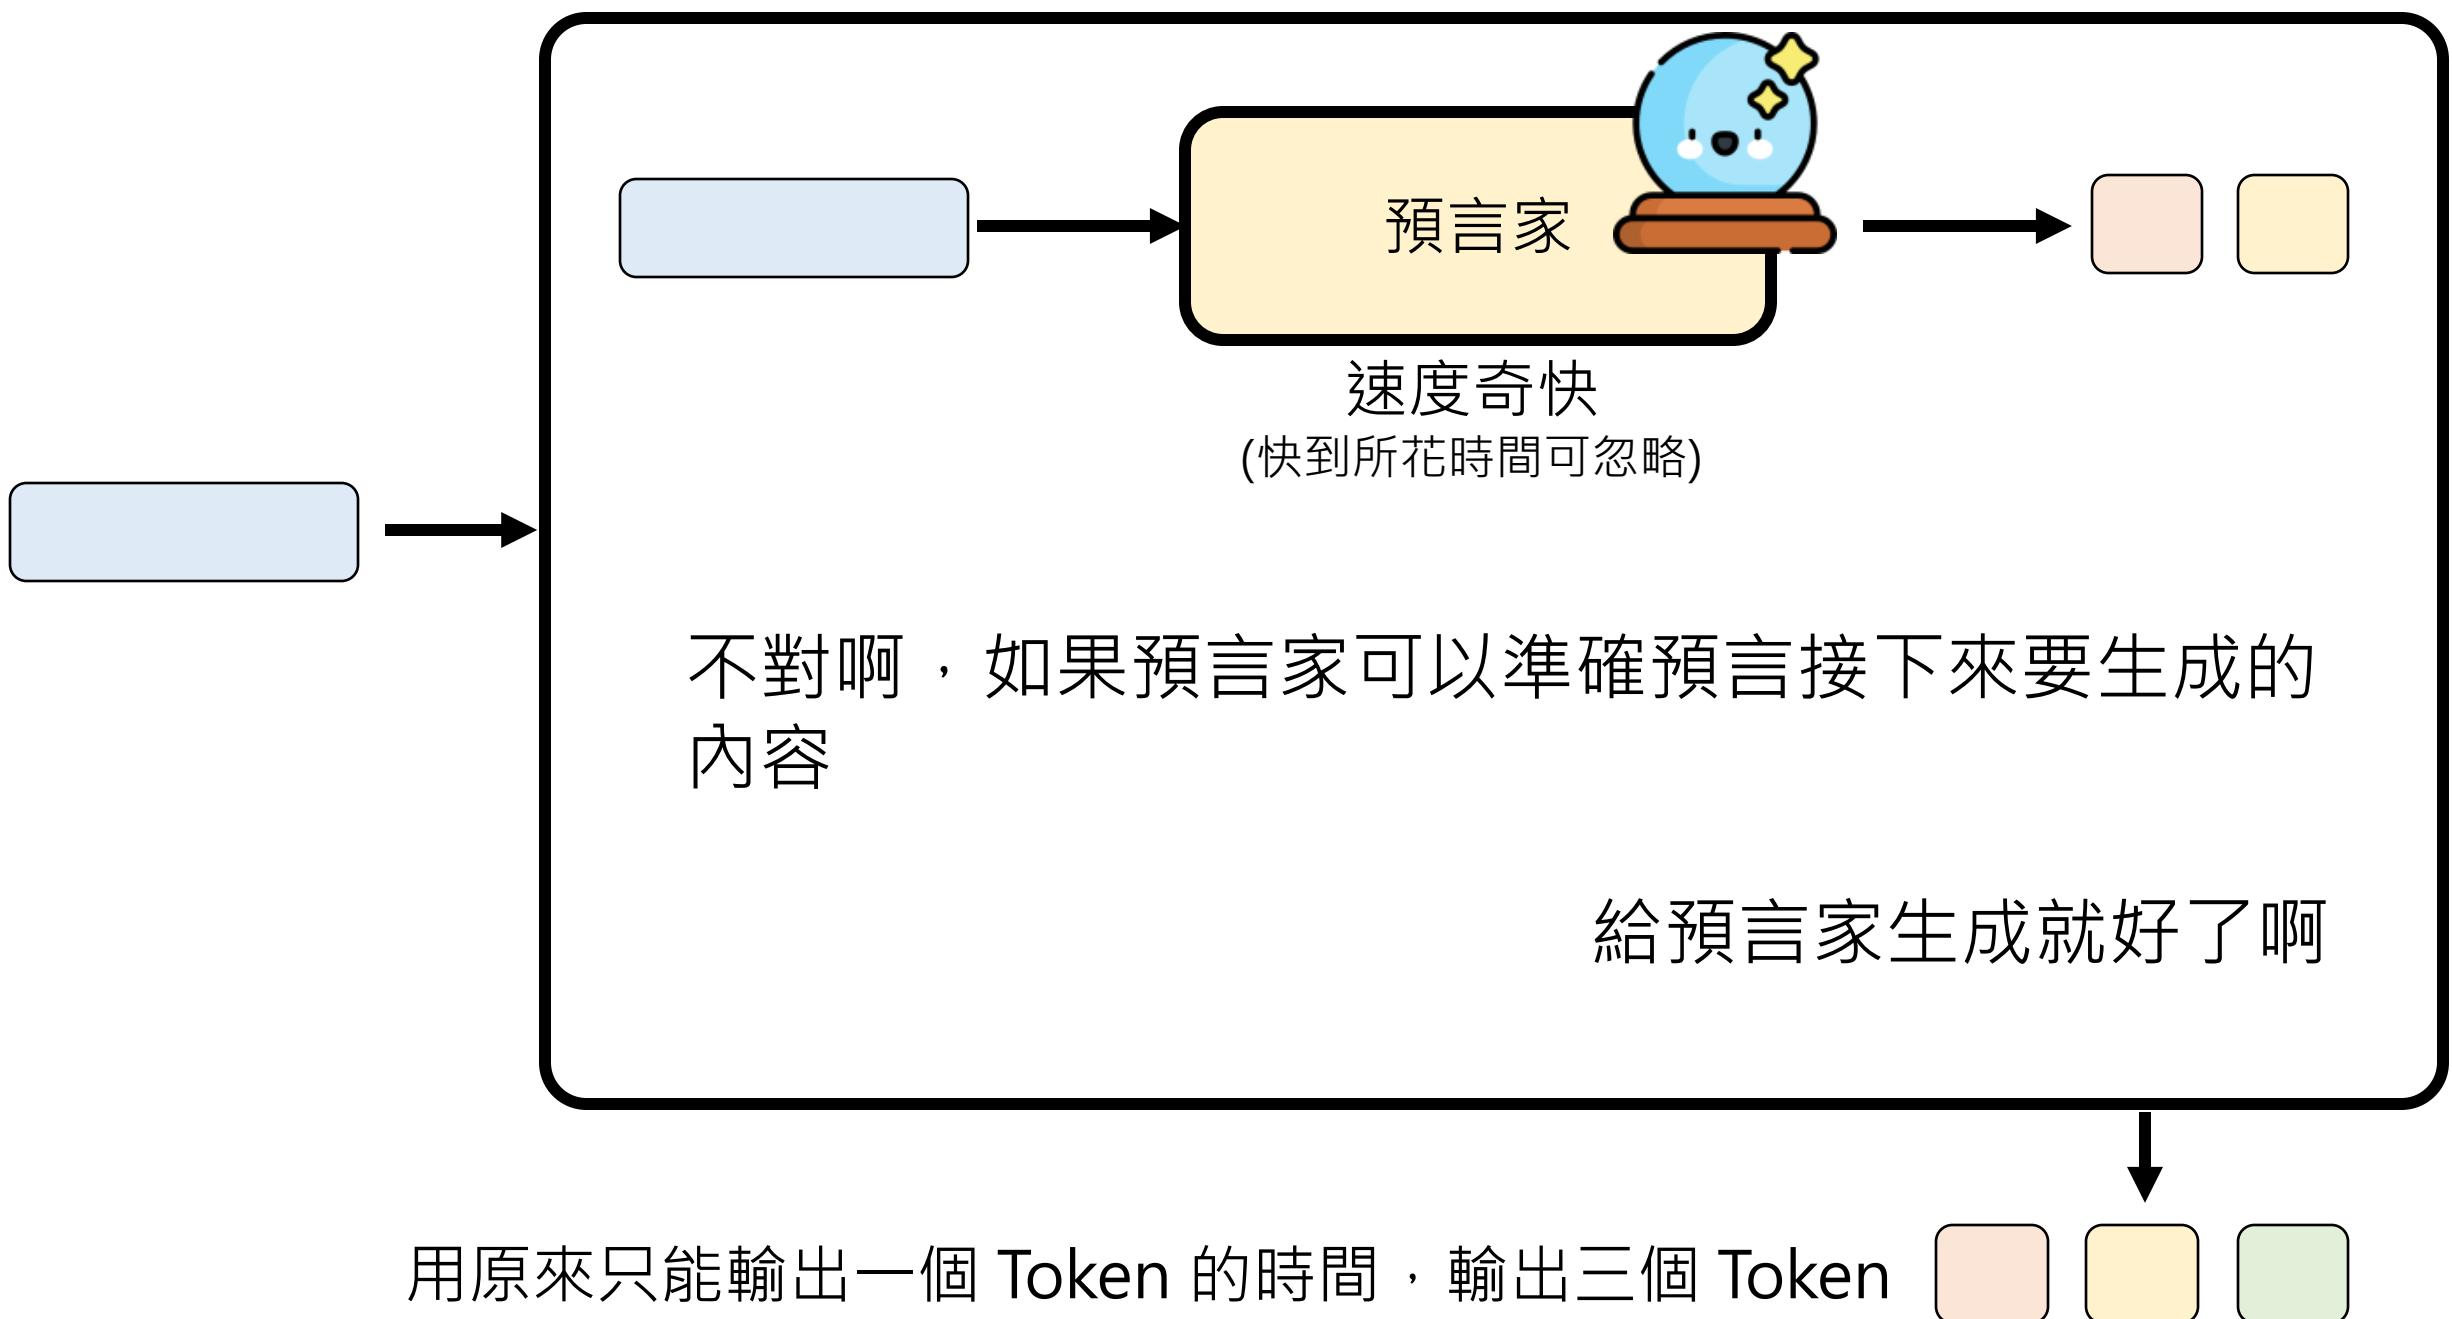

預判接下來
會說什麼

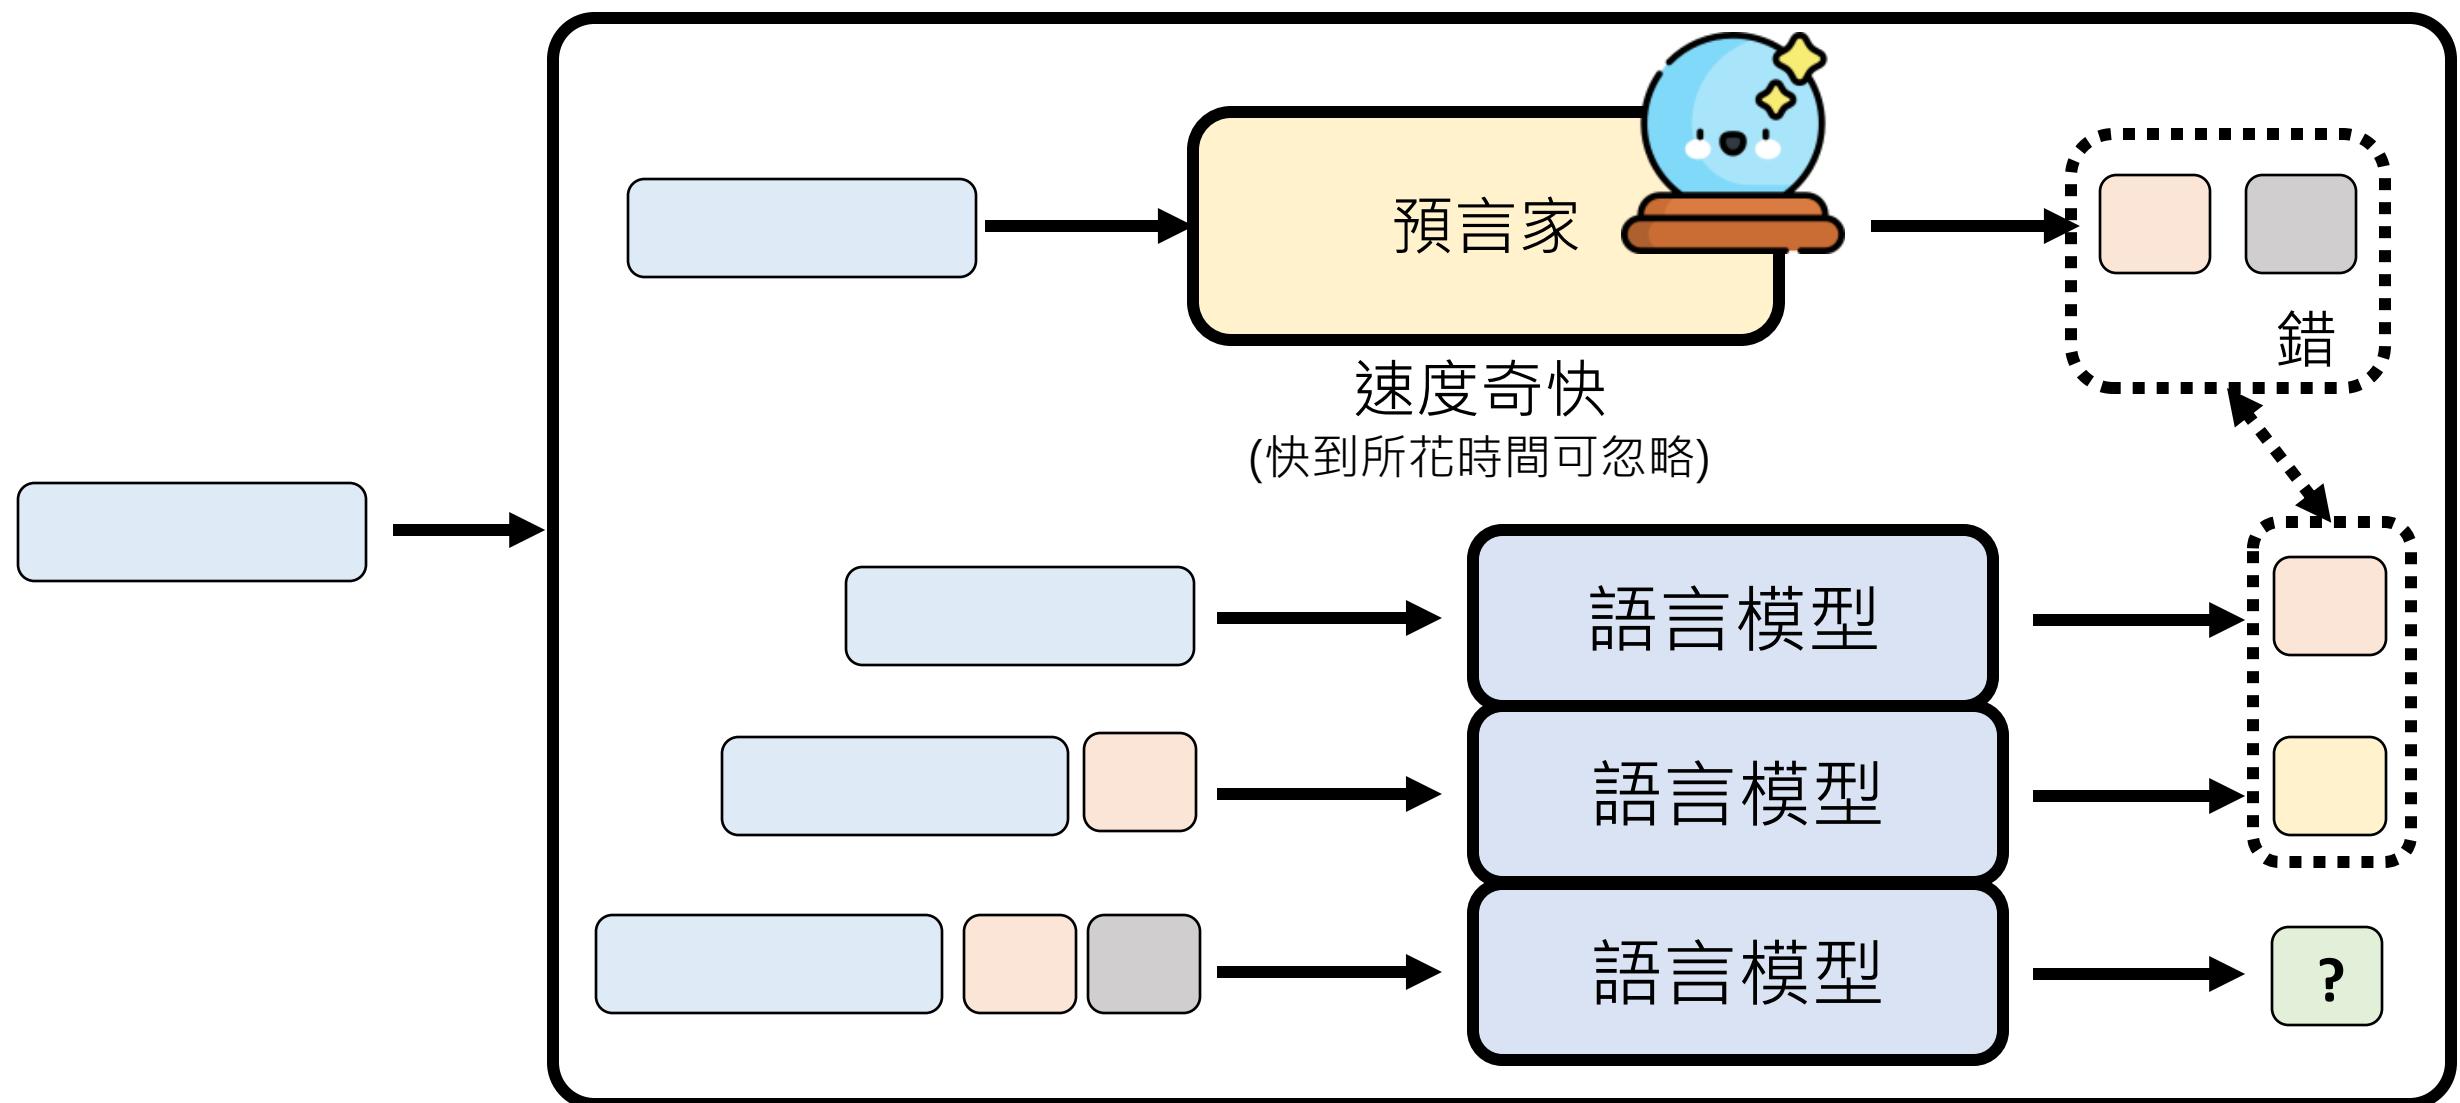

同時

速度X 2

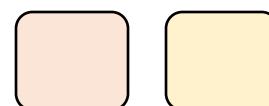

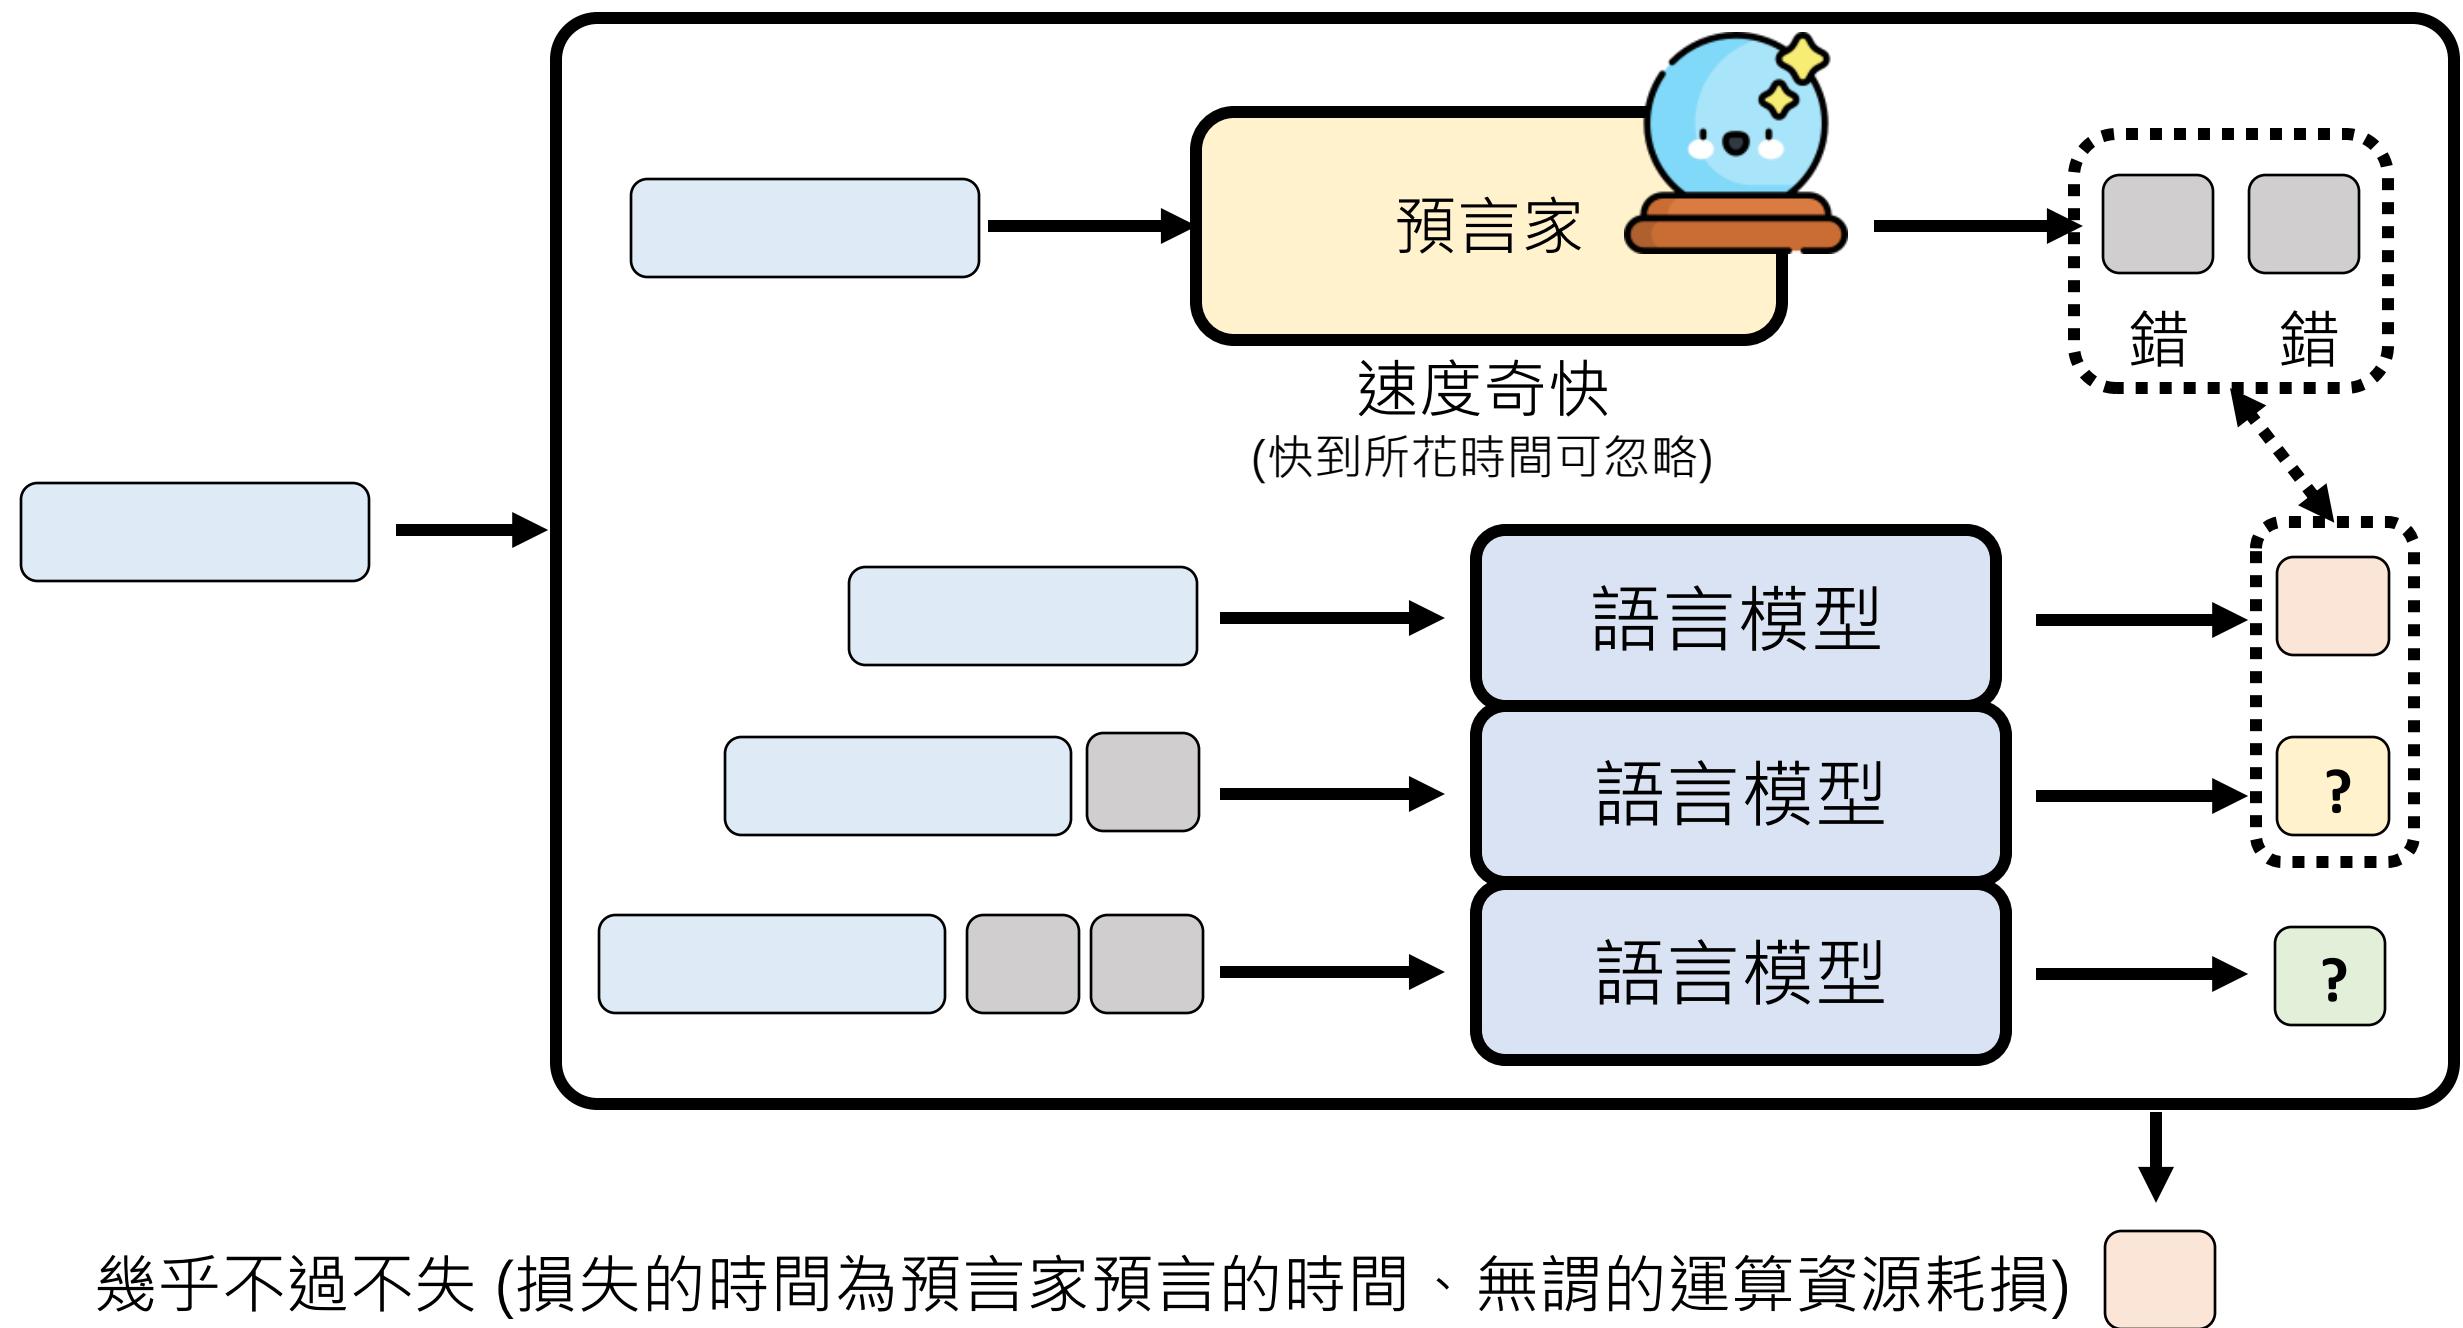

用原來只能輸出一個 Token 的時間，輸出二個 Token

還是有賺!

Speculative Decoding

預言家

要求：超快速、犯錯沒關係

Non-autoregressive Model

Compressed Model

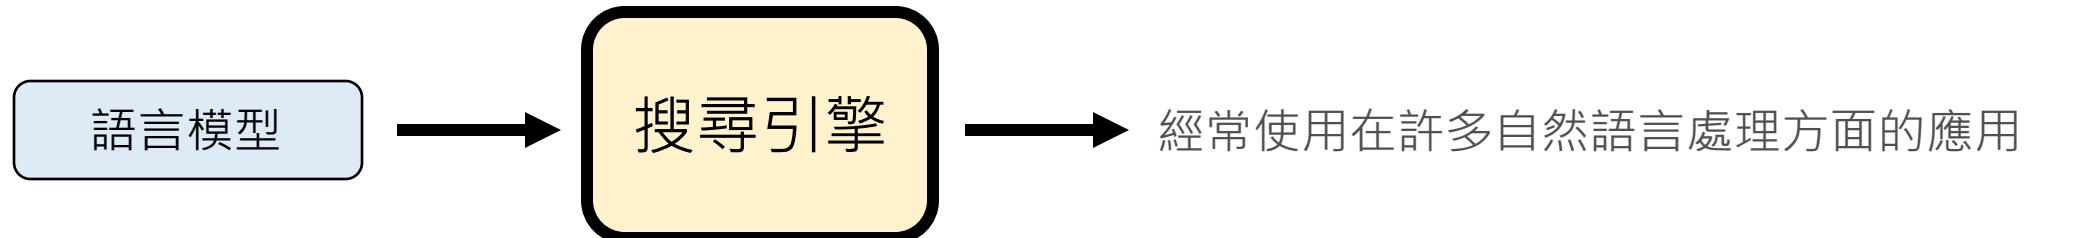

Speculative Decoding

預言家

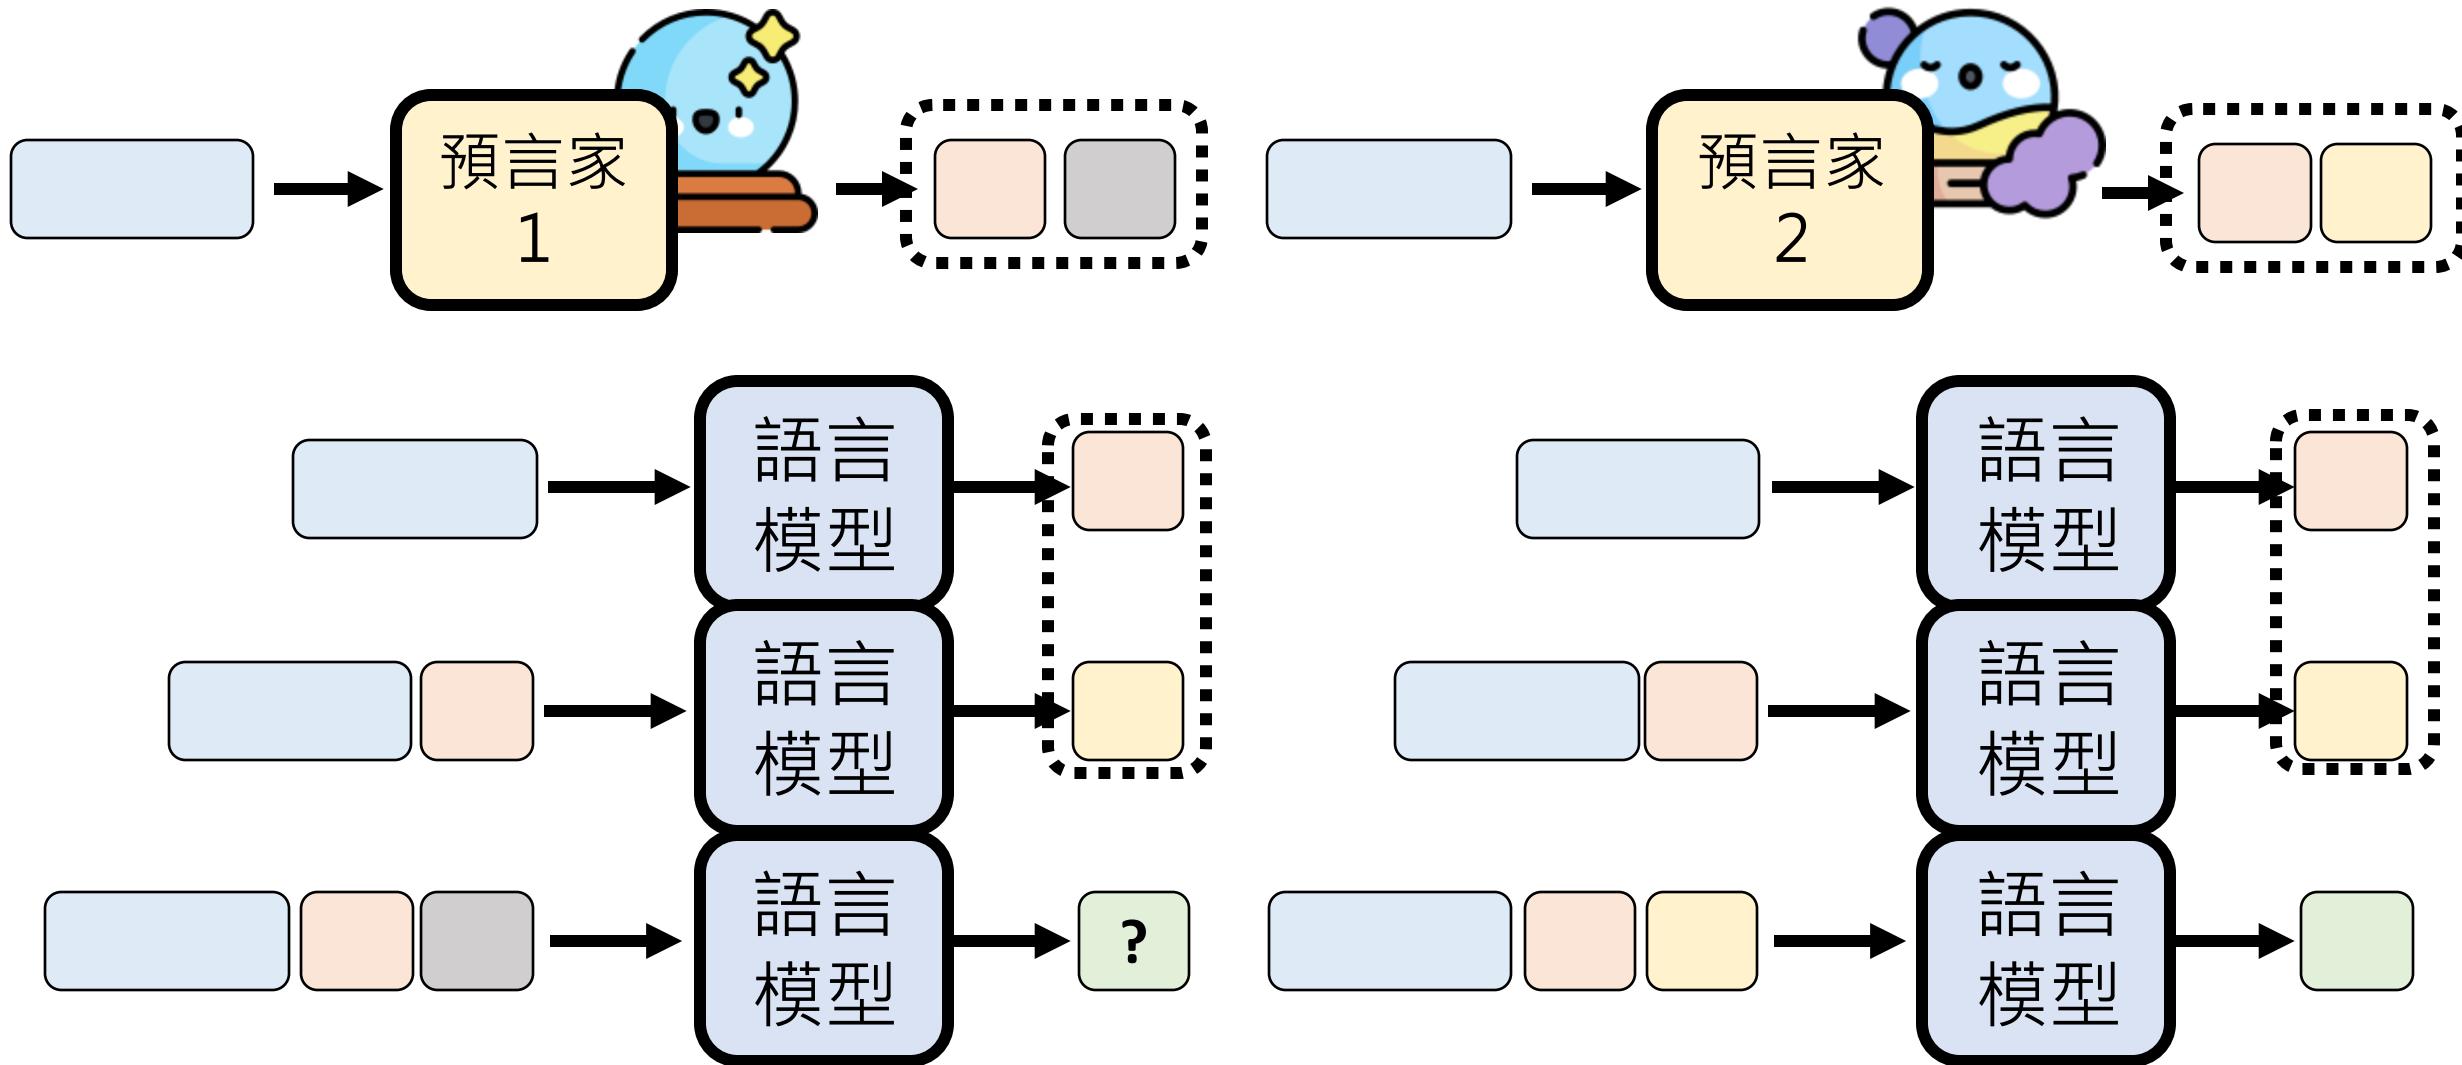

- 預言家一定要是語言模型嗎？

要求：超快速、犯錯沒關係

A screenshot of a Google search results page. The search bar at the top contains the query "語言模型". Below the search bar, there are tabs for "全部", "新聞", "圖片", "影片", "購物", and "更多". On the far right, there is a "工具" (Tools) button. The main search results area shows a snippet from Wikipedia: "維基百科 https://zh.wikipedia.org › zh-tw › 語言模型 · 語言模型- 維基百科，自由的百科全書". Below this, a red underline highlights the sentence "經常使用在許多自然語言處理方面的應用" in the snippet.
